1. Abstract

The Second Overarching Stakeholders Workshop was held on 1 and 2 April 2025 in Zandvoort, the Netherlands, as part of the Horizon Europe projects Marine SABRES and MARBEFES. The event brought together 13 selected stakeholders and 22 researchers. The goal was to review results obtained in the projects during the last 2 years, to gather feedback on these results, improve shared understanding, participate in the co-design of the next steps of the project, and work together on practical tools that support better decisions for managing coasts and seas.

During the two-day workshop, participants tackled key topics in a combination of presentations, table and group discussions, and Mentimeter surveys. The workshop encouraged open discussion, allowing participants from different sectors, such as government, NGOs, research, and business, to share local knowledge and practical understanding together with scientific insights. Sessions focused on usefulness of approaches and tools, such as Causal Loop Diagrams, BowTies, the MARBEFES Toolbox (a collection of easy-to-use tools that help connect science with decision-making), effects of scenarios of change (based on future social and environmental changes), and a 'Shiny-app' as a prototype for a decision support system. These approaches and tools aim to illustrate and improve the understanding of how ecosystems, people, policies, and management are linked, and how different choices affect the future in the balance between these elements.

The key-factors governing the balance between nature, and socio-cultural and economic aspects as obtained from the earlier consultations in Marine SABRES and MARBEFES were largely confirmed. This means also that in the further development of regional policies and management, the importance of geographic position (north versus south, and mainland versus islands), of regional (cultural) differences, and stakeholder diversity have to be taken into account.

The major approaches and tools to connect the key factors, such as the Causal Loop Diagram and BowTie, were all largely understood and seen as useful for insight in the functioning and managing of the marine environment. Nevertheless, it was noticed that the tools could become complicated or too academic, and thus should be simplified and accompanied by simple guidelines.

Similarly, approaches like the PESTLE (Political, Economic, Social, Technological, Legal, and Environmental) framework, the SSPs (Shared Socio-economic Pathways), and Socio-cultural and Ecological Valuation, were seen as useful approaches to explore drivers of environmental change, perceptions on key challenges, tradeoffs, and prioritising governance options for coastal and marine management.

It was recognised that key challenges for the management of Socio-Ecological Systems (SES) in the marine environment, and especially for Marine Protected Areas (MPAs) were mainly formed by the legal complexity beyond national jurisdiction and (the lack of) political willingness, which indicates that these governance issues need more attention to be tackled. Fragmentation of policy and regulatory overlap, with regard to impacts of e.g. climate change, alien species, and massive tourism, were indicated as the common concerns.

The stakeholders support strongly the construction of the Marine SABRES ShinyApp DSS (Decision Support System) and the MARBEFES Toolbox for integrating the discussed approaches and Tools, yet taking into consideration 1) a User-friendly design for a high diversity of stakeholder groups, 2) a clear structure and navigation to explore tools easily (free search, filters, as well Al guided), 3) search and filter functions by area, data type, ecosystem, and user-needs, and 4) inclusion of short guidelines (1 to 2 pages) and examples to support understanding and application of tools.

Stakeholder appraisal scores on the approaches and tools of the Marine SABRES as well of the MARBEFES project were very high, as was also the score for the organisation and content of the workshop. It demonstrates a clear joint interest of the stakeholders and project-researchers in an ongoing involvement in the co-design of useful and usable tools, and the collective commitment to shape a sustainable future for Europe's marine and coastal regions.

2. Introduction

A two-day stakeholder engagement workshop was held on 1–2 April 2025 in Zandvoort, the Netherlands, bringing together researchers from the Horizon Europe projects Marine SABRES and MARBEFES. The workshop aimed to:

- Share an overview of results gathered from stakeholder interviews and surveys conducted in 2023,
- Gather stakeholder feedback and appraisal on the preliminary outcomes produced across various project Work Packages (WPs),
- Foster collaboration between stakeholders and researchers to support the further development and cocreation of decision-making and management tools for marine and coastal areas.

Of the 231 stakeholders interviewed in 2023, a representative group of 13 Overarching Stakeholders was invited to join with 22 researchers for more focused and in-depth discussions at the Zandvoort workshop. The workshop provided a vital platform for engaging stakeholders, policymakers, and researchers, ensuring an inclusive and diverse range of perspectives and helping to consolidate views on the key elements of coastal social-ecological systems.

This marked an important step towards fostering collaboration, advancing stakeholder-supported decision-making and management practices for coastal areas, and strengthening the impact of research outcomes from both Marine SABRES and MARBEFES.

A combination of presentations, table and group discussions, and Mentimeter surveys was used to introduce the various sessions, to promote the interactive discussions, to obtain feedback, and to find joint conclusions for further steps to be taken.

The full results from the Mentimeter sessions conducted during the workshop, all PowerPoint presentations, a list of participating stakeholders, and a detailed program agenda, are given in the appendices .

By engaging with stakeholders and incorporating their perspectives, both projects seek to develop useful and practical tools and approaches that enhance planning and decision-making. They also aim to increase public awareness and understanding of the interconnections between ecosystems, biodiversity, society, and the economy in coastal regions. Ultimately, the goal is to promote sustainable use of marine and coastal areas while safeguarding the health of marine ecosystems and biodiversity.

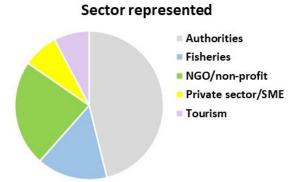

(photo credit Lars Olav Sparboe, Tromso, Norway)

3. Stakeholder Participation

In the first surveys and interviews, during spring 2023 and winter 2024/25, stakeholders were consulted across several European research areas, distributed among five major regions: Macaronesia (Atlantic islands), Mediterranean, Atlantic Coast, Baltic, and Arctic (Fig. 3).

From this broader group, a subset of stakeholders was invited to participate in the Overarching Stakeholder workshops designed for more focused group discussions.

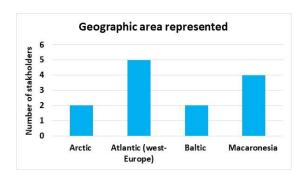

belonged to various sectors (Fig. 1).

The stakeholders at the Zandvoort workshop in 2025

Authorities were most represented, followed by those from NGO/Non-profit organisations (belonging to the category of Public audience"). For the category of "Industry and private sector" representatives from SMEs, Fisheries, and Tourism were present.

Figure 1. Stakeholder representation by professional sector at the Zandvoort workshop

Most stakeholders came from the western European mainland (east-Atlantic coast), followed by those from the south Atlantic (Macaronesia), and those from the Arctic and Baltic regions (Fig 3). The skewed geographic representation should be kept in mind when drawing conclusions from the results.

Figure 2. Geographic areas represented among Zandvoort workshop stakeholders.

5. Results

5.1. Feedback on second round of stakeholder consultations - first results concerning priorities

Workshop activity and purpose

The key findings and analyses from the first and second round of stakeholder surveys and interviews conducted in the spring of 2023 and winter of 2024/25, respectively, were presented to participants (Appendix 3a). Through a Mentimeter survey (Appendix 4a) and open-floor discussions, participants' opinions and feedback on the results were collected.

The purpose was to gather feedback on the results of the second series of stakeholder consultations, whether the outcomes matched their expectations, and what additions they would advise.

Observations and key-findings

During the first consultation round, 231 stakeholders were interviewed to identify key factors in balancing nature, the economy, and society in coastal areas. Key priorities that emerged included nature conservation, the effects of large-scale tourism, biodiversity, economic considerations, and pollution.

In the second round, which involved 175 stakeholders, feedback largely confirmed these initial findings, while also raising a few new priority issues such as urban development, offshore wind farms, climate change, invasive species, and the significance of cultural heritage.

Moreover, with regard to the stakeholders their interactions with governance levels, it was shown that stakeholders at islands are more connected to the local governance, whereas stakeholders at mainland locations were more connected to national governance.

These results were generally seen by the Overarching Stakeholders as logical, informative, interesting, useful, and meaningful.

A few additions were brought forward, such as better policies with regard to invasive species or protected areas, or the youth feeling disconnected from nature. The other elements mentioned were included in the main outcomes of the earlier consultations.

The analyses of stakeholder viewpoints are thereby largely complete.

Relevance

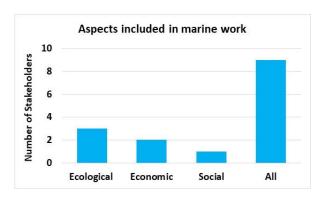

With regard to the key-factors in European regions, and how to use them for the further development of regional policies and management, the importance of geographic position (north versus south, and mainland versus islands), of regional (cultural) differences, and stakeholder diversity have to be taken into account.

5.2. Causal Loops and BowTies

Workshop activity and purpose

In this session two key tools — the Simple Social-Ecological System (SES) model and the Bow-Tie analysis — were introduced to help stakeholders better understand and manage complex coastal and marine environments. These tools are used to simplify ecosystem assessment, risk management by highlighting risks and opportunities, and governance by connecting environmental factors and identifying intervention points. The tools were introduced in a couple of presentations (Appendix 3b), followed by Mentimeter surveys to gather stakeholder feedback on applicability and any barriers using the tools (Appendix 4b)

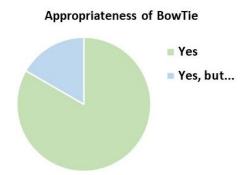

Observations and key-findings

In response to the question whether in their work with (or managing) the marine environment, they include only ecological, social, or economic aspects, or all, the majority of the stakeholders indicated that they incorporate all aspects (Fig 4).

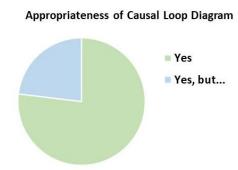

This suggests the tools have the capacity to serve the needs of the stakeholders and potential users.

Figure 4. Aspects considered in stakeholders' marine work.

When the stakeholders were asked whether the BowTie approach is appropriate for addressing their management and sectoral questions, most considered it suitable (Fig 5). However, some descriptive comments suggested "Yes, but might be too complicated to use on a daily basis". In the discussion it was also indicated that the tools can become too academic and should be simplified to be useful and usable by stakeholders. In response to the question whether there is a reason NOT to use the tool, several stakeholders indicated the BowTie may be complex with endless relations, and thereby complicated to use.

Figure 5. Stakeholder views on the appropriateness of the BowTie approach.

When questioned on the Causal Loop Diagram (CLD) the stakeholders perceive this tool also to be appropriate for addressing their management and sectoral questions (Fig 6). Nevertheless, one stakeholder replied "Yes, but it is large, and every factor is a potential error".

In response to the question whether there is a reason NOT to use the tool, most stakeholders' see no reason, several stakeholders indicated the tool may be complex with endless relations, and gets complicated very fast.

Figure 6. Stakeholder views on the appropriateness of the CLD

Relevance

The two tools can be considered appropriate tools to better understand and manage complex coastal and marine environments. Nevertheless, quite some comments do emphasise the need for further simplifications and clear communication on the use and capacities of these tool's.

5.3. Scenarios of Societal and Environmental change under SSP1, SSP3 and SSP5

Workshop activity and purpose

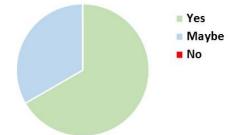

The session aimed to explore possible futures for marine and coastal ecosystems through three global Shared Socio-economic Pathways (SSP): Sustainability (SSP1), Regional Rivalry (SSP3), and Fossil-Fueled Development (SSP5). After a short presentation (Appendix 3c), the participants examined how these scenarios can be adapted through a downscaling process to local contexts and applied to assess drivers of biodiversity and habitat change, as identified by both scientific and stakeholder inputs. At the end a short Mentimeter survey was held (Appendix 4c).

Observations and key-findings

The discussion surfaced key challenges, including the difficulty or lack of translating scenario outcomes into policy action, the tendency to refuse in politics from the worst scenario, and the limited accessibility for younger audiences since instruments are too difficult to them. The need for active citizen debate, stakeholder involvement, and clearer communication was stressed. Stakeholders also emphasized the importance of integrating public perspectives and cultural values to ensure relevance and inclusivity.

The stakeholders indicated their wish to use a more interactive tool and guidelines to be able to follow the best way for reaching the chosen scenario. This feedback from the session is a stimulus for the creation of a new online platform to explore scenarios in a Virtual Research Environment. This platform will draw on biodiversity and human impact data to model adaptive management options, helping to bridge global models with regional realities in support of sustainable marine governance.

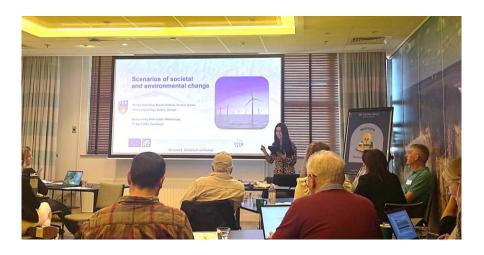

In response to the question "Do you see the potential of applying scenarios in your work?", the majority of participants indicated "Yes", a few answered "Maybe", and nobody answered "No" (Fig. 7). This highlights a generally positive perception of scenario-based approaches and its relevance to the participants' professional contexts.

Figure 7. Participant views on the potential of applying scenarios in their work.

Relevance

The downscaling process of climatic and socio-economic scenarios used in the projects can help to explore in a useful and understandable way a range of possible future environmental changes in localized contexts, and thereby stimulate debate and support decision-making.

5.4. Acceptance and options for governance: the PESTLE approach

Workshop activity and purpose

This section used after a short introduction (appendix 3d) structured questionnaires to be filled individually and in groups, with which the overarching stakeholder would reveal their preferences regarding the management options given to them, and through the group activity discuss the implications, costs, and acceptability of each one of them. This was followed by a presentation of group results and discussion. The aim was to gather stakeholder perspectives on marine governance using the PESTLE framework (Political, Economic, Social, Technological, Legal, and Environmental). The session explored perceptions of key challenges, trade-offs, and governance options for coastal and marine management. Moreover, a goal of this session was to investigate how overarching stakeholders understand the options for management that came from previous steps in the project and how they choose or accept the management proposals/goals presented to them.

Observations and key-findings

Key themes included broad agreement on the ecological benefits of MPAs, recognition of the need for stronger regional collaboration, and concerns about political and jurisdictional complexity.

The outcomes included insights from three thematic groups. **Group 1** examined the balance between Marine Protected Areas and tourism in Macaronesia, identifying political leadership as the key driver for resolving multi-sector challenges. **Group 2** focused on sustainable fisheries management in the Arctic, concluding that technological measures were the most effective and affordable solution, while political and legal frameworks remain slow and complex. **Group 3** addressed tourism and coastal ecosystem conservation in Tuscany, highlighting legal enforcement as the most impactful and cost-efficient approach to managing tourism pressures and protecting the environment.

By facilitating both personal reflection and group deliberation, using the PESTLE approach, the activity revealed insights into how stakeholders understand, accept, and prioritize governance strategies. Discussions highlighted the complexities of reaching consensus in accommodating diverse worldviews, mirroring real-world challenges in marine and coastal decision-making. Initial observations underscore the value of group exercises in surfacing conflicting interests, fostering dialogue, and reaching consensus/compromise on marine and coastal governance topics, such as tourism and fisheries.

Relevance

The results informed both the ranking of priorities and the level of acceptance of different governance pathways, contributing valuable input for policy development and future planning.

5.5. Estimating effects of management and policy measures by means of SES models

Workshop activity and purpose

The socio-ecological system (sSES) modelling approach was firstly explained (appendix 3e) and in groupwise discussions applied to understand the complex interactions between human activities and ecological processes. In the following sub-session the feasibility of establishing a marine corridor of MPAs in Macaronesia was explored using the sSES approach and thereby also using the earlier (2023) assessed stakeholder perspectives. Finally a Mentimeter polling was held to assess the stakeholders' viewpoints on MPAs through the methods used (appendix 4d).

Observations and key-findings

For the first part, using the Tuscany case study, the model revealed that pressures such as boat moorings negatively affect critical components like *Posidonia oceanica* and seawater clarity, leading to system unsustainability. However, targeted management actions—such as anchoring restrictions—demonstrated potential to restore ecological balance and achieve long-term policy goals.

The sub-session underscored the value of systems modelling in identifying effective interventions and supporting evidence-based decision-making for sustainable marine governance.

The following sub-session focused on the feasibility of a marine ecological corridor connecting the Azores, Madeira, and Canary Islands. The corridor is intended to enhance connectivity, protect migratory species, and support ecosystem resilience. A stepwise assessment was used to weigh ecological, sociological, and economic benefits—such as conservation gains, tourism potential, and fisheries recovery—against trade-offs like maritime activity restrictions.

The most frequently selected top priority for Marine Protected Areas (MPAs) management was "Improve biodiversity connectivity" and the second choice was "Support recovery of migratory species" (Fig. 8). Other objectives such as "Strengthen regional marine governance/cooperation" and "Support resilient fisheries" were commonly ranked in the middle. In contrast, "Enable sustainable tourism and blue economy" ranked lowest, indicating it may be viewed as of minor concern.

As the top challenge in MPA management the Stakeholders identified "Jurisdictional and governance complexity", followed by "Political will/alignment" (Fig. 9). These results highlight the structural barriers in governance that can impede effective MPA management. Surprisingly, "Long-term financing" formed only a minor challenge.

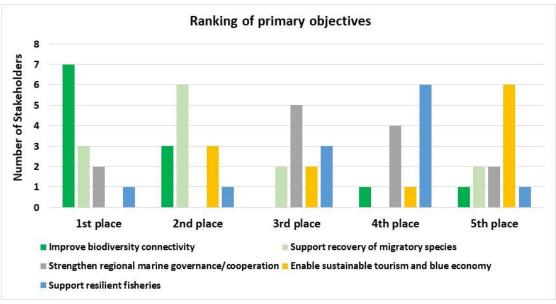

Figure 8. Stakeholder rankings of primary MPA objectives

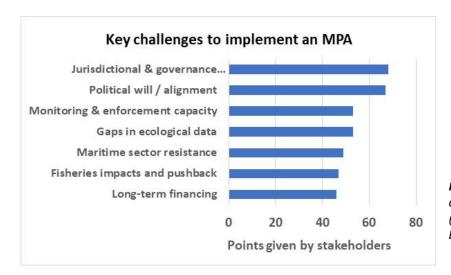

Figure 9. Stakeholder rankings of key challenges to Marine Protected Area (MPA) implementation (1 to 7 points to be given per stakeholder)

The stakeholders expressed a strong agreement on the statement that "An MPA could deliver clear ecological benefits", next to that "There is a need for more regional collaboration on marine protection" (Fig. 10). In contrast, the statement "The political conditions are favorable for advancing an MPA proposal" got a low score, suggesting concern about the current political landscape for the implementation of an MPA.

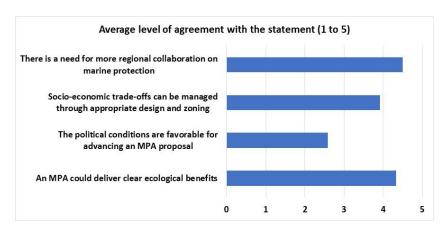

Figure 10. Average agreement (on a scale from 0 to 5) with statements regarding MPAs

Relevance

The session emphasized the need for adaptive, cross-border governance and informed stakeholder collaboration. Key challenges for MPA management were formed mainly by the legal complexity beyond national jurisdiction and (the lack of) political willingness, which indicates that these governance issues need more attention to be tackled.

5.6. Governance of marine ecosystems: Stakeholders' perspectives

Workshop activity and purpose

The session adopted a participatory format that encouraged storytelling and open dialogue to discuss governance practices related to marine ecosystems. As a basis the results from the MARBEFES consultations in winter 2024-25 were used, whereby stakeholders could highlight all the challenges in the governance of marine ecosystems they are facing, and also bring forward their visions and pathways for solutions. During the workshop the methodology and first results from the consultations were presented (appendix 3f), followed by group discussions to obtain additional feedback from the overarching stakeholders and to assess how unique each area with its own characteristics and dynamics is.

Observations and key-findings

In the earlier consultations the fragmentation of policy and regulatory overlap, with regard to impacts of e.g. climate change, alien species, and massive tourism, were indicated as the common concerns through the BBTs. Discussions in the workshop also covered the role and relevance of Marine Protected Areas, with differing views on their effectiveness, the degree of protection, degree of enforcement, and implications for local communities. Despite the diversity of contexts that may differ for each study area, the same common concerns emerged in the workshop as in the consultations, reflecting shared governance struggles.

Relevance

The session not only reinforced the importance of a bottom-up approach in governance practices but also ensured that the scientific tools being developed in the projects are grounded in the realities of local stakeholders, enhancing the potential of those instruments to be regionally relevant for long-term implementation.

5.7. The MARBEFES Toolbox

5.7.1. Introduction to the Toolbox and Toolbox design

Workshop activity and purpose

The aim of the session on the Toolbox was to show the diversity of the 30+ instruments, i.e. tools, that will become available for stakeholders in the MARBEFES Toolbox, ranging from advanced molecular and trait-based methods—such as metabarcoding, eDNA, and telomere analysis—to broader modelling approaches like Bayesian Belief Networks (BBNs) and Structural Equation Modelling (SEM) used to explore ecological relationships (appendix 3g). These tools support knowledge expansion, environmental, social, and economic assessments, data innovation, and decision-making (appendix 3g.1). The Toolbox includes physical devices, guidebooks, species ID tech, data analysis methods, and citizen science tools. The toolbox will be flexible and user-driven, allowing filtering by data type, area, and ecosystem component

A prototype of the Toolbox-design and the outline of a dedicated website were shown (appendix 3g.2), and discussed through Mentimeter questions (appendix 4.e) and in open discussions.

• Observations and key-findings

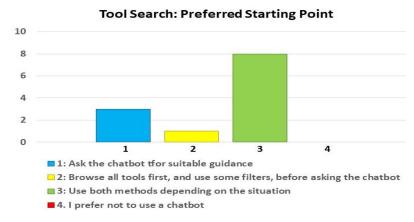

Participants discussed what the Toolbox should look like, how it should function, and what features would best support users, keeping in mind that it will be designed for diverse stakeholders—researchers, educators, communities, PA managers, policy-makers, marine planners, and industry.

Key considerations suggested by the stakeholders are:

- User-friendly design for the high diversity of stakeholder groups
- Clear structure and navigation to explore tools easily
- Search and filter functions by area, data type, ecosystem, and user-needs
- Integration of guidance and examples to support understanding and application of tools
- Interactive elements to enhance engagement and usability

Regarding the entry-modes of the Toolbox, to reach the right or preferred tool, the stakeholders were requested to choose from four options (Fig. 11):

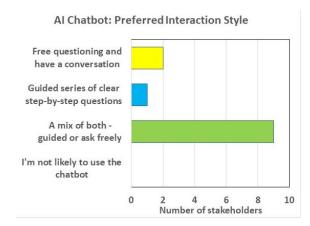

- 1. Ask the chatbot for suitable guidance
- 2. Browse all tools first, and use some filters, before asking the chatbot
- 3. Use both methods depending on the situation
- 4. I prefer not to use a chatbot

The majority of stakeholders preferred a flexible approach (Option 3), indicating they would use both user-modes depending on their needs. A smaller group preferred to ask the chatbot directly (Option 1), while only one stakeholder chose to browse all tools first before using chatbot assistance (Option 2).

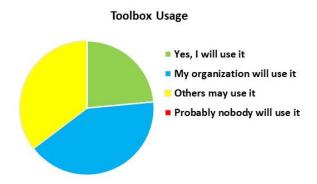

Figure 11. Stakeholder preferences for starting a tool search in the Toolbox

This suggests that while users value the efficiency of chatbot support, they also appreciate having the option to explore tools independently. Therefore, designing the Toolbox with both interactive chatbot support and robust filtering options will best accommodate varying user preferences and improve overall usability.

Regarding the interaction styles with the AI chatbot the majority of the stakeholders preferred a mixed approach—having the option to follow guided step-by-step questions, or ask open questions freely (Fig. 12). These results indicate that most users value flexibility and suggest the chatbot should support both structured and open-ended interactions.

Figure 12. Preferred chatbot interaction style among stakeholders.

The larger part of the stakeholders indicated they themselves or their organization will use the Toolbox, reflecting high individual and institutional interest. Another group felt others may use the Toolbox (Fig. 13). These results highlight a strong potential for both individual and organizational application and usage of the tools.

The stakeholders advised to add spoken tutorials, of only a couple of minutes, for each tool to improve the (correct) use of the tools.

Figure 13. Stakeholder interest and intent to use the Toolbox.

Relevance

The interaction with the stakeholders helped to ensure the Toolbox website is practical, accessible, and adaptable to a wide range of marine ecosystem management contexts.

5.7.2. Broadscale biological traits and Metrics of habitat function

Workshop activity and purpose

In this section, as an example of the concepts available in the Toolbox, two tools were introduced in short presentations to offer opportunity for feedback and questions in an open group discussion. The tools being "Broadscale biological traits" focusing on describing functional diversity by analyzing species characteristics that define their ecological roles, rather than their taxonomic classification (appendix 3g.3), and "Metrics of habitat function" aiming to quantify and map ecosystem functioning across habitats within a specific area (appendix 3g.4).

Observations and key-findings

The tool "Broadscale biological traits" helps to assess the variety of biological traits within an ecosystem to better understand ecosystem functioning and resilience. An example was given how it has been applied in regions like the Finnish Archipelago Sea (Fig. 14). The data, and maps on the data, help to link marine biodiversity and ecosystem functioning with ecosystem services to support sustainable marine management.

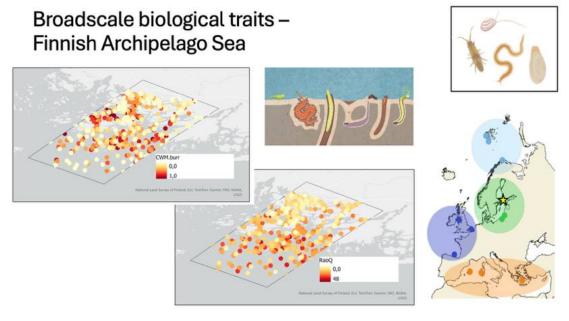

Figure 14. Broadscale biological traits, example from the Finnish Archipelago Sea BBT

The "Metric of Habitat Function" tool focuses on identifying key biological, geochemical, and physical processes that contribute to ecosystem services, thereby supporting effective environmental assessment and planning. To this end, it uses habitat maps, environmental data, and GIS layers to quantify and visualize ecosystem functions. An example was given how it has been applied in the Menorca Channel (Fig.15.

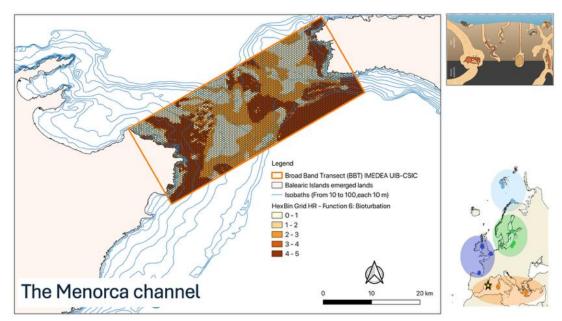

Figure 15. Metric of habitat function, example from the Menorca Channel BBT

The discussion included topics such as the possibility to include temporal aspects into the analysis (only spatial patterns were presented) as well as the availability of data and possibilities to obtain graphical elements (maps) through the tools. In all, these topics clearly show that the stakeholders were interested in the applications and saw potential in adapting the tools further.

Relevance

These tools help integrate nature values and human pressures into marine spatial planning and decision-making processes. Overall, the engagement confirmed the relevance and potential for further adaptation of these tools, offering valuable insights for both tool and toolbox developers.

5.8. Tools & Stakeholders

Workshop activity and purpose

This session summarized results of discussions held during the second series of stakeholder consultations in the MARBEFES and Marine SABRES projects, an in which the stakeholders could indicate the appraisal of a couple of tools developed in the projects until now (appendix 3h).

Observations and key-findings

The majority of stakeholders in the second series of consultations understood the concept of the BowTie completely or most of it, in such a way they would use the tool themselves. Yet, quite some stakeholders indicate that there could arise also difficulties in using the tool, and to this end clear guidelines should be given. For using the tool an online web-app is preferred above in the cloud or as a stand-alone program.

The stakeholders indicated that the essential environmental elements were all or at least partly included in the Causal Loop Diagrams that were developed for their areas. This means the consultations in the first year

of the projects have captured sufficiently the most important environmental elements. This may forms the basis for the further tool development, including the Decision Support System (see next chapter).

The Hydrodynamic and Biogeochemical (HBGC) modelling tool, which simulates physical, chemical, and biological marine processes, were reviewed in terms of spatial/temporal scale preferences and desired outputs, supporting both water column and seabed assessments. This technical tool was judged easy, or the opposite, not easy to understand and use. In case of using the tool, no clear preference for a spatial or temporal scale was given – stakeholders would like to receive information at spatial scales from less than 1 km upto 200 km, and over time at scale from 1 weeks to 100 years.

Relevance

Stakeholder confirm that the shown tools developed in the project can be useful to them, though proper guidelines should be composed for the tools.

5.9. Decision Support Systems (DSS)

Workshop activity and purpose

At the start of the session stakeholders received a brief introduction to Decision Support Tools (DSTs) (appendix 3j). covering the concept of decision-making processes, key steps to effective decision-making, the definition and purpose of DSTs, and how these tools can enhance decision-making outcomes. Stakeholders were then shown the prototype of the DSTs, specifically the sSES (simple Social-Ecological System) network implementation using the ShinyApp web- interface (Fig. 16) and the GIS tool. Finally, a Mentimeter survey was used to gather feedback on stakeholders' perceptions of the DSTs (appendix 4f).

The prime purpose of the session was to familiarise participants with the ShinyApp DSTs and to illustrate how this could improve the decision-making process, and to gather feedback on its relevance and usability.

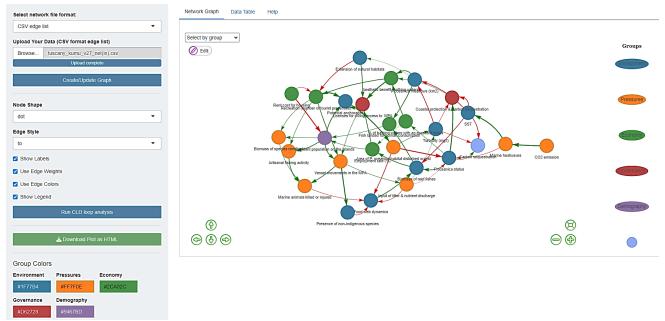

Figure 16. Example of the ShinyApp DST tool in a web-interface

Observations and key-findings

The stakeholders were very positive towards the applicability of the Shiny-App DSS tool and the important insights it may provide. Stakeholders indicated it could be vital in maritime spatial planning, particularly for Marine Protected Areas (MPAs).

Nevertheless, the stakeholders advised to focus on what stakeholders can use, i.e. the main processes and outcomes, and not to go into too much (technical nor scientific) detail, and not to mention all caveats and critical issues. Thereby, among the stakeholders a high interest was expressed in the "key drivers" in, and the "outcomes" of, the whole system, to understand the main factors driving the dynamics in the sSES, and to see the final consequence of the various cause-effect relationships in the system. In addition, interest was indicated in the recognition of bottlenecks and leverage points in the system.

A high-priority was given to include standardised methods for handling qualitative data, easy navigation and modification of system models, and clear mechanisms to prevent data misuse.

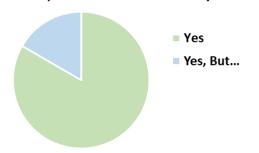

For selecting factors to be inserted in the ShinyApp DST tool the stakeholders would prefer to have a list with predefined factors as well as the possibility to create, or to add, themselves such a list (Fig. 17). Stakeholders also emphasized the need for spatial information and sector-specific impact assessment capabilities.

Figure 17. Number of stakeholders preferring to select sSES factors from a pre-defined list or to create a list with factors themselves

The stakeholders were strongly in favor of embedding Geographic Information Systems (GIS) into the Shiny-App DSS, and in majority would use it in their work. They would prefer in the GIS application for islands a spatial resolution at scales of 1 to 5 k), and for mainland areas finer scales (around 100 meters). These insights may help to guide the design and application of the Shiny-app DSS to be tailored to regional needs.

Is GIS helpful to construct a sSES for your area

The majority of participants were positive on the role of GIS in constructing a sSES for their area (Fig.18), indicating a strong trust in the utility of GIS for supporting SES development.

Figure 18. Stakeholder perception on the usefulness of GIS in constructing a Simple SES.

Relevance

The information collected helps to develop both the functionality and interface of the ShinyApp DSS further, and to increase the practical applicability of the tool.

5.10. Valuation of Coastal Systems

Workshop activity and purpose

At the start of the session the results of the earlier rounds of consultations were shown (appendix 3j). Stakeholders were then asked to evaluate the relevance and applicability of different valuation approaches—ecological, accounting, economic, and socio-cultural—in the context of marine biodiversity. For the second part of the session the stakeholders were meeting at the beach of Zandvoort to discuss the relevance of *insitu* studies for socio-cultural valuation

Observations and key-findings

In the first part its was shown that Ecological valuation of biodiversity and ecosystems is twice more preferred than the other types of valuation, whereby Capital Accounting is the least valued, and Economic and Socio-cultural valuation received intermediate scores.

The second part of the session brought participants outside to Zandvoort beach—an improvisation designed to energise participants, reframe our thinking, and connect with the local coastal environment. The aim was to consider the benefits of physically going to research sites as a research team studying cultural ecosystem services and benefits. At the start of the session, it was explained that *in situ* research helps to incite researcher empathy and foster ethical approaches to studying people and place. Such an approach with *in situ* interviews and workshops is very important for identifying and engaging local stakeholders with knowledge of, or interests in, cultural ecosystem services. The place itself may host cultural activities that are not apparent online, and which demand the inclusion of specific stakeholders. Visiting a place can be an ideal opportunity to make contact with these stakeholders

(photo credit Lars Olav Sparboe, Tromso, Norway)

In this session at the beach the stakeholders and researchers were requested to ponder the value of visiting a study site as a research team at the beginning of a cultural ecosystem services study.

All stakeholders were forthcoming about discussing the value of *in situ*, or place-based, research at local study sites. Some of their observations included that observational and *in situ* research themselves are difficult to pin down—observations and opinions are dynamic and changeable aspects. Thereby, cultural value is often a lived value, that may not be fully captured by numbers or words, and moreover may change upon reflection in the days or months after an event. This makes it also difficult to capture/conceive a cultural value and even more difficult to incorporate it into policy?

Nevertheless, it is important to do long-term place-based engagement with locals, and can't just be done in one short visit. The reason is that local people can have long-term environmental or cultural knowledge which is not readily available elsewhere. Moreover, local people may also have quick and easy answers to ecological or cultural problems that researchers are struggling with for long periods of time.

Relevance

The session showed that Socio-cultural and Ecological valuation should receive a (more) prominent place in the policies, management and planning of marine and coastal ecosystems. Moreover, the session garned valuable feedback on *in situ* research approaches and Social and Cultural ecosystem values. This feedback will be incorporated into the guidelines for socio-cultural valuation in the MARBEFES stakeholder-facing handbook for ecosystem valuation.

5.11. Marine Protected Areas

Workshop activity and purpose

In this interactive session, stakeholders participated in a role-playing exercise centered on the hypothetical creation of a new Marine Protected Area in their region (appendix 3k). Divided into small groups, each participant was assigned a role representing a different interest group—often differing from their real-life perspective—to encourage empathy and broaden understanding. The groups engaged in discussions, negotiations, and compromises to formulate a strategy for establishing the protected area. Group presentations at the end highlighted the various approaches taken by the stakeholders.

Observations and key-findings

The final overviews given by the stakeholders revealed diverse approaches to protection levels and management strategies, while also highlighting shared difficulties in reaching consensus and developing concrete solutions. Although the activity was not intended for data collection, it served as a valuable exercise in exploring the complexities of marine conservation governance, reflecting real-world tensions frequently observed across various case study sites.

Relevance

The session underscored the need for clearer initial information, but effectively showed the potential to foster engagement and awareness around stakeholder conflicts and the multifaceted nature of marine protected area implementation.

5.12. Stakeholder Evaluation and Appreciation of the Tools

At the end of each day the stakeholders were asked to fill in a Mentimeter survey to indicate their appraisal of the various tools and approaches that were presented (appendix 4g,4h). To this end the stakeholders could rate to what degree they understood the structure and function of the approaches and tools, to what extent they expected them to be successful, and whether the approaches and tools would be used in the management of their marine area.

All presented tools and approaches were understood to quite a high degree (Fig. 19), reflecting strong overall comprehension of the Marine SABRES and MARBEFES tools.

The principles and structure of the BowTie, SSP (Shared Socio-economic Pathway) scenarios, and the CLD (Causal Loop Diagram) were understood a lot or quite a lot, directly followed by the Toolbox and ShinyApp being understood somewhat or quite a lot. The Valuation of coastal systems, Biological traits and Habitat function were understood somewhat.

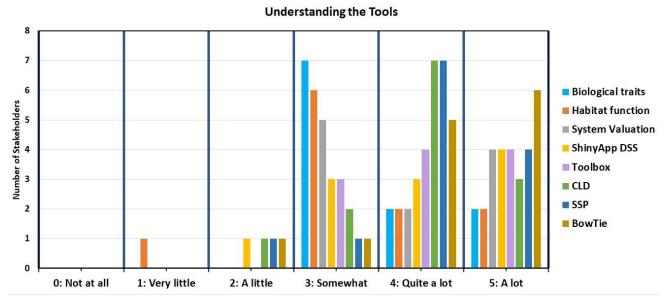

Figure 19. Level of understanding the structure and principles of the presented approaches and tools

The relevance of all tools was high for the professional sectors of the stakeholders, with the SSPs and Stakeholder Priorities as most relevant (Fig. 20). This indicates that the tools developed in Marine SABRES and MARBEFES strongly align with the stakeholders' professional interests, and are well suited for a wide range of stakeholders.

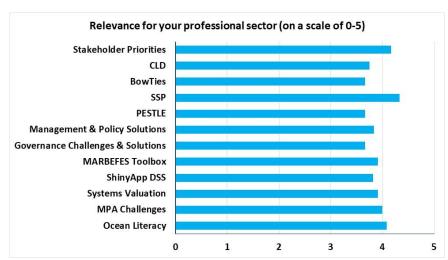

Figure 20. Average relevance (on scale from 0 to 5) of the tools and approaches for the stakeholder's professional sector

The stakeholders expected also all tools to be up to a high level successful, with the BowTie tool and PESTLE approach being the most successful (Fig. 21)

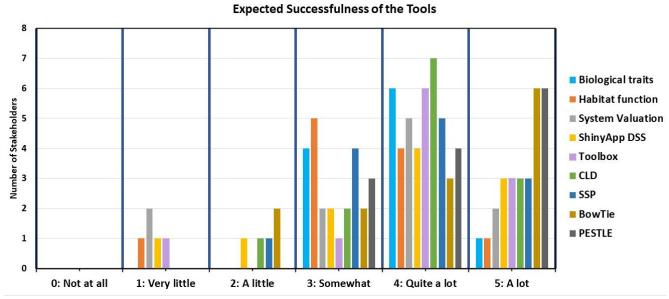

Figure 21. Level of success expected by the stakeholders for the presented approaches and tools

Stakeholders expressed very high expectations regarding the use of the instruments (Fig. 22). Up to 94 % of their answers were a positive Yes about using the tools for the management in their marine area, whereby two-third indicated it would be used by others in their area and one-third would also use it themselves.

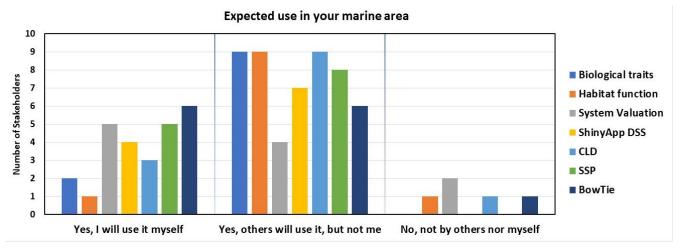

Figure 19. Level of understanding the structure and principles of the presented approaches and tools

These results highlight that stakeholders found all the presented tools relevant and useful and expect them to become integrated into the work in their area, though a few tools may need a further explanation to be fully understood and of use.

5.13. Stakeholder Evaluation of the Workshop

All general workshop aspects, as workshop organization, communication, timing and catering, were judged by the stakeholders to be very good (Fig. 21, appendix 4i), reflecting a well-organized event.

A small criticism was brought forward regarding the catering since some dishes were called vegetarian but there was fish in them, or vegan but there was cheese in.

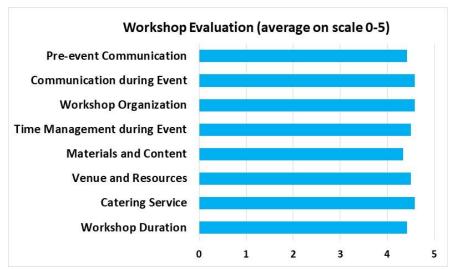

Figure 21: Average scores for the appraisal of general workshop aspects.

The stakeholders actively expressed strong interest in attending similar events in the future, and will strongly recommend the workshop, that met their expectations to a very high degree (Fig. 22).

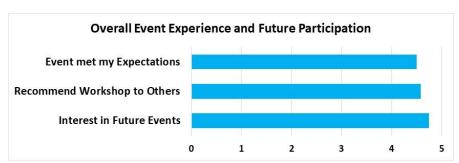

Figure 22: Stakeholders' appraisal and interest in future participation.

These results indicate that the stakeholders involved in Marine SABRES and MARBEFES experienced significant value in the workshop and most likely will remain engaged in future actions.

When questioned what issues they liked most, the stakeholders mentioned to "Participate in meaningful work", "The feedback from the researchers", "Great to see the progress on the tools from last year", "Learning new tools", "The networking with smart, kind people has been really enriching and pleasant ", "The discussions", "Exchange of different experiences", "Wonderful friendly people", "Herman is very good moderator and keeps time scheduled", "Good atmosphere and location", "The good clima of cooperation between participants", "Group Spirit", "The participative approach", "The opportunity to contribute", "The high level of the presentations", being "Aware of different realities/knowledge", "Getting to understand somewhat complex issues by being clearly explained by the team in such a short time was very valuable", "You're heading in the right direction. Keep up the good work!!", and lastly "Thank you so much for another wonderful 2 days. I look forward to seeing the progress again next year too".

Also some issues that should be taken care of were mentioned, such as a "Tight schedule", "A bit of more time to interact", "Days were very long - would be better to do shorter days over 3 days", "Maybe a bit too busy program", "Some were detailed explanations", "Extensive theoretical contents", "Terms used by scientists (abbreviations) sometimes difficult communicated".

These evaluation indicated that, irrespective a tight schedule with sometimes too detailed theoretical sessions, the workshop was generally well-received, with strong satisfaction on the overall structure and content of the event and how the information was conveyed.

6. Conclusion

The Second Overarching Stakeholders Workshop, held in Zandvoort in April 2025, marked a significant step forward in advancing participatory, evidence-based approaches to marine and coastal governance. Bringing together a diverse group of stakeholders and researchers from across Europe, the event facilitated rich, constructive dialogue on pressing issues such as biodiversity loss, climate change, tourism, governance complexity, and the development of practical tools for sustainable management.

Through interactive sessions, scenario planning, tool demonstrations, and co-creative exercises, the workshop not only validated prior research findings but also generated new insights and actionable feedback. The presentations together with the co-creative exercises and vivid discussions helped to further increase understanding of the various approaches and tools that could previously have raised questions.

Participants expressed strong support for the integrated use of the developed tools—such as Causal Loop Diagrams, BowTie analysis, Socio-ecological models, and the ShinyApp Decision Support System—as well as for inclusive, regionally sensitive governance frameworks.

The engagement outcomes underscore the value of stakeholder engagement and cross-sector collaboration in developing tools that are user-friendly, adaptable, and aligned with real-world decision-making needs. By grounding scientific innovations in the lived experiences and expertise of stakeholders, Marine SABRES and MARBEFES have laid a foundation for more resilient, informed, and collaborative marine policy and practical tools and approaches.

The workshop's high levels of participant satisfaction, coupled with clear interest in ongoing involvement, demonstrate a collective commitment to shape a sustainable future for Europe's marine and coastal regions.

The insights gained during the workshop will directly inform the refinement of project tools and approaches by the project-researchers, in co-design with enthousiastic and committed stakeholders, ensuring their continued relevance and effectiveness in supporting both sustainable ecological integrity and societal well-being.

Finally, during a workshop mostly some remarkable or strong comments are made, some of which we would like to share with you:

- People still do not know the costs of mitigation and adaptation if they would know they might think different make more clear that it costs a lot.
- Environment is only for the rich people, the other think with their pocket-money.
- Depropriation of fisheries-grounds should not be an issue, since the sea is not only for the fishermen, it is for all the community we need a change in approach.
- The instruments are too difficult for young people it has to be simplified make instead of long written guidelines, spoken tutorials of a couple of minutes.
- We have to sell the products that are useful for the stakeholders, without mentioning all caveats and critical issues.

Acknowledgements

We acknowledge the European Union's Horizon Europe programme for funding of the Marine SABRES project under grant agreement No. 101058956 and of the MARBEFES project under grant agreement No. 101060937. Without this support, such meaningful cross-regional, multi-stakeholder dialogue would not have been possible.

Appendix 3a. Feedback on the Second round of Stakeholder consultations - first results

Marine SABRES is funded by the European Union's Horizon Europe programme under grant agreement No.101058956

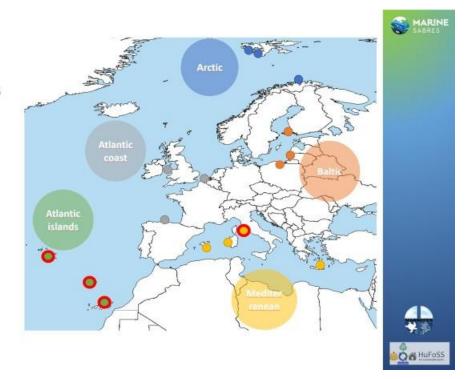

MARBEFES has received funding from the European Union's Horizon Europe research and innovation programme under Grant Agreement no 101060937

Stakeholder Consultations 2nd round November 2024 - April 2025

Content:

- Aims
- Methods used
- Results

First year:

Stakeholder engagement through interviews, asking the stakeholders:

What are the most important elements in the balance between the ecology (nature), economy, and society in your coastal area, and what are the influences and pressures on this balance

Together in the sister-projects MARBEFES and Marine SABRES in total 231 stakeholders were consulted

Second year:

Stakeholder engagement through group consultations, asking the stakeholders feedback on results In total (until now) 175 stakeholders were consulted

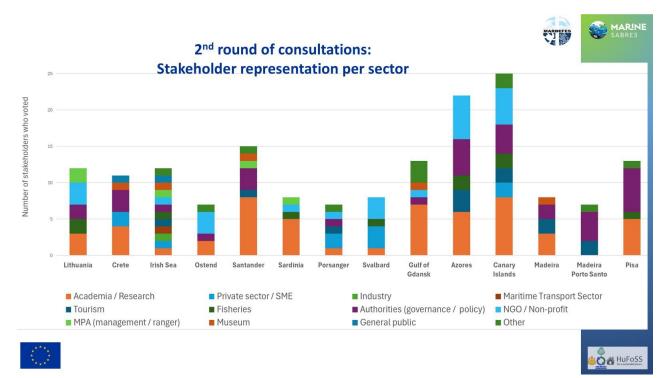

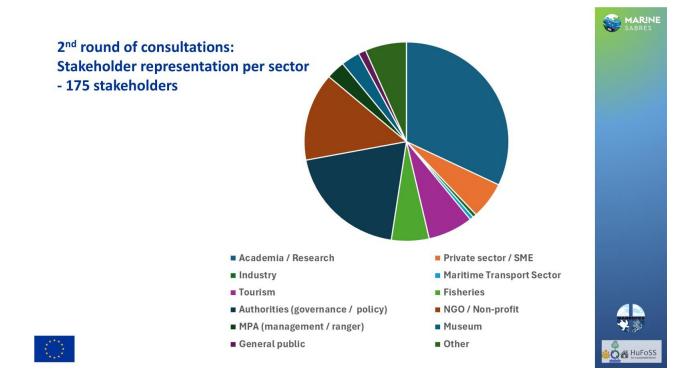

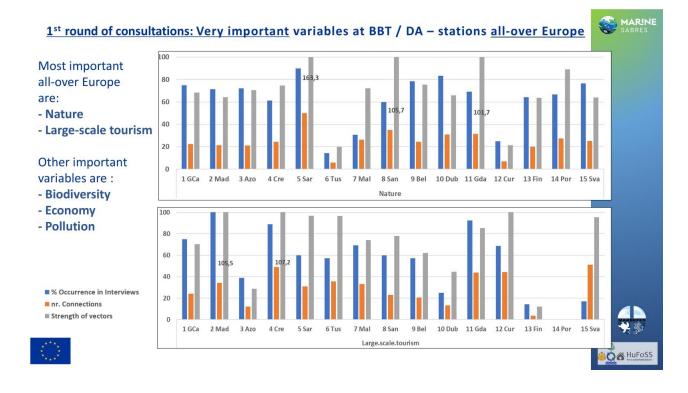

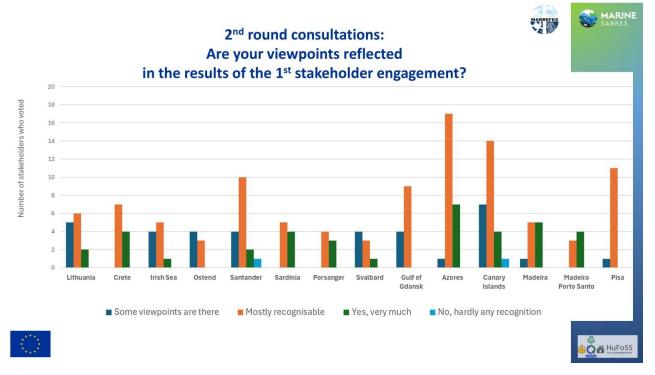

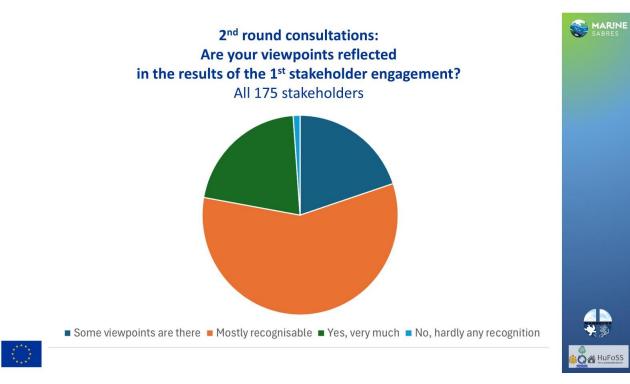

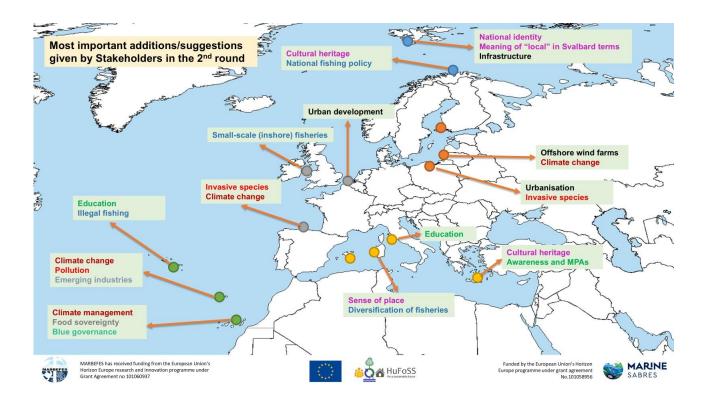

Engagement with Governance in Coastal Communities

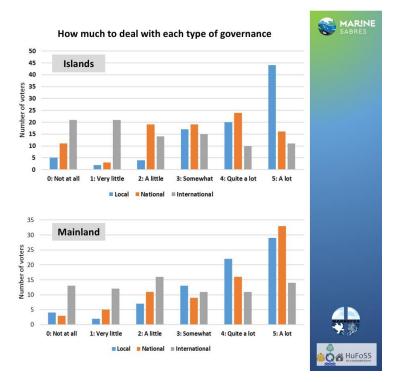

Stakeholders were asked to share their experiences in engaging with different levels of governance, i.e.
Local, National, and International

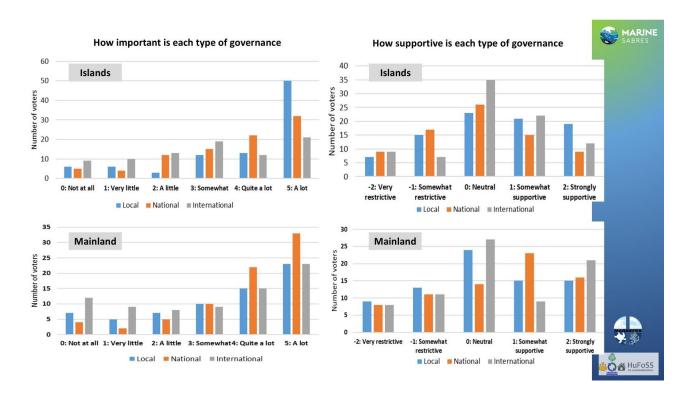

Questions were:

- How much your sector has to deal with each type of governance
- How important to your sector is each type of governance
- How supportive to your sector is each type of governance

The difference in perceptions between "Mainland" and "Island" communities was emphasised

Appendix 3b. Causal Loops and BowTies

STAKEHOLDER CONSULTATIONS

Causal Loops and BowTies:

Tools to connect the most important factors in our environment, and to understand Coastal Systems

Michael Elliott, Anita Franco, and Gemma Smith

- IECS Ltd.

OVERARCHING STAKEHOLDER WORKSHOP

igoplus Objectives of the Session

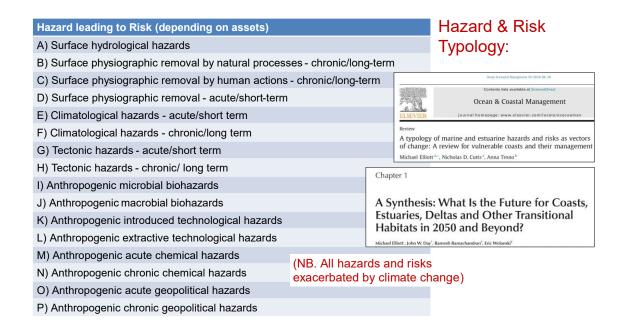

- 1. Provide an overview of the Simple SES and Bow-Tie tools.
- 2. Explain how these may aid users in understanding a problem
- 3. Gain feedback and input from you as Stakeholder!

Management Questions:

- Where are the problems & What changes do they cause?
- What is the impact of these on ecosystem structure and functioning?
- What are the repercussions for ecosystem valuation based on economy-ecology interactions?
- What are the future environmental changes and economic futures?
- What governance framework is there, what do stakeholders need?
- What can we do about the problems?
- Where are the risks and how to address them now and in the future?
- What are the governance successes, failures and implications?
- How 'good' is the decision-making?
- What are the bottlenecks, showstoppers and train-wrecks?

Challenges for management (RA&RM; OA&OM):

Risk Assessment:

- Where are the problems and what changes do they cause? (ExUP & EnMP)
- · What is their impact on ecosystem structure and functioning?
- What are the repercussions for ecosystem valuation based on economyecology interactions?
- · What are the future environmental changes and economic futures?

Risk Management:

- What governance framework is there, what do stakeholders need & what are successes & failures?
- What can we do about the problems, hazards & risks and how to address them now and in the future?
- How 'good' is the decision-making?

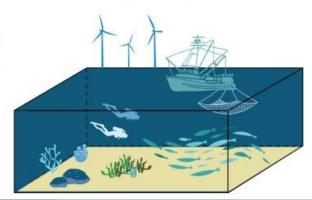

And the corollary: Opportunity Assessment and Management

(Elliott, 2014 Mar. Poll. Bull.; Cormier et al 2019 OCMA, and others)

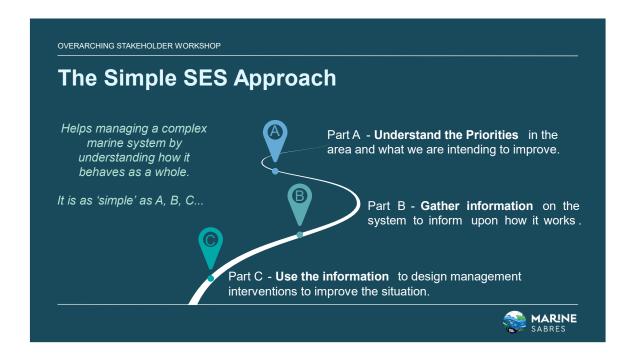

OVERARCHING STAKEHOLDER WORKSHOP

What is a Marine Social-Ecological System?

 A marine area where human and natural elements exist together and impact each other.

Part A - Understand the Priorities in the area and what we are intending to improve.

Project Management

Risk Assessment

Stakeholder engagement and communication

The rules are in place (Policy) and who is responsible for management (Administration)

Define challenges, Priorities, and Scope of the approach with stakeholders

Identify indicators for Social and Ecological elements in the system.

Part B - Gather information on the system to inform upon how it works.

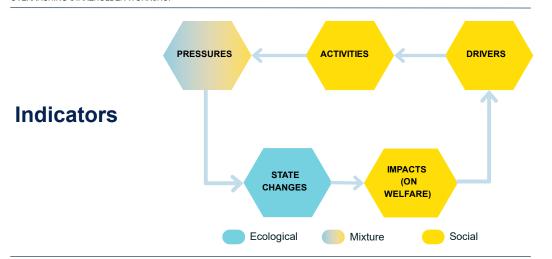

Using data, expert opinion, and stakeholder knowledge assess the connections between indicators.

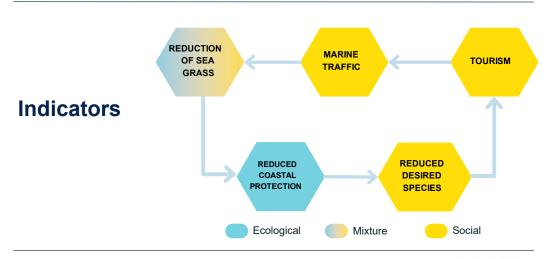

View the system in focus as a whole.

OVERARCHING STAKEHOLDER WORKSHOP

Water

BowTies to connect important factors

- What is an/some issue(s) of concern in managing your area?
- Do you need a rigorous, ISO-standard method to tackle the issue(s)?
- What are the causes of the concern(s)?
- Can you rigorously determine prevention controls to remove the concern and mitigation controls to lessen the consequences?
- Can you determine the consequences (positive and negative) from the concern?
- If the consequences are not prevented or mitigated then do they lead to further chains of management?
- · Do you need to carry out scenario analysis using a Bow-tie structure?

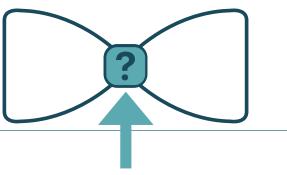

STAKEHOLDER WORKSHOP

Step 1: The central event

 Also known as the knot, the problem or the issue, this is key to forming the Bow-Tie or what is the problem I am worrying about?

The central event of Bow-tie in MARBEFES

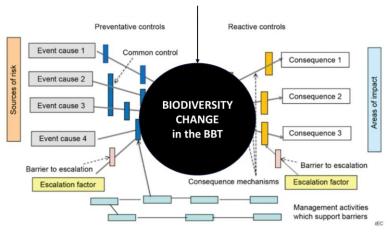

Figure B.2 – Example of Bowtie

Source: ECS/ISO (2019)

22

MARBEFES – 'the big idea' – the 'central knot of the BT'

"What natural conditions and human activities (both local and global) are now reducing the value (in ecological and socio-economic terms) of biodiversity at your BBT or will reduce that in the future and what can/will marine management and

governance do about it?"

Fulfilling this requires you to know:

- · the type and value the biodiversity in its various forms,
- the endogenic and exogenic causes of changes to it,
- the consequences of those changes in ecological, socioeconomic and socio-cultural terms,
- the types of solutions possible including governance and management, and
- the desires of stakeholders and their advisors.

To do all of that requires clear guidance for effective an efficient use

STAKEHOLDER WORKSHOP

Step 2: Causes

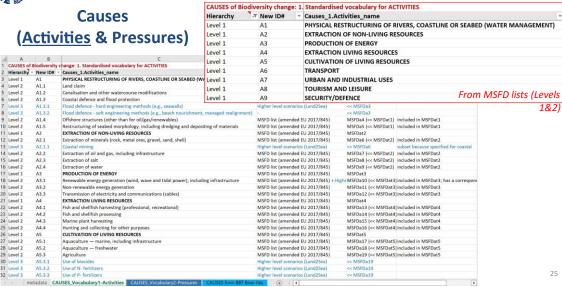

- · What are the causes of the central event/problem?
- What mechanisms can be used to prevent these causes from leading to the central event?
- What management measures that can be applied to reduce the magnitude of or likelihood of the central event happening due to the causes? (e.g. to adapt, control, mitigate or compen -sate?)
- What factors can enhance the management measures and what factors can cause them to fail?

STAKEHOLDER WORKSHOP

Step 3: Consequences and opportunities

- What are the consequences (negative) arising from the central event/problem if no actions were to be taken?
- Are there any opportunities (positive consequences) that arise from the central event/problem happening?
- What management measures can be applied to reduce the magni-tude of or likelihood of the consequences?
- What enhancement measures can be applied to reduce increase the benefits from any opportunities (positive consequences)?
- · What factors can enhance the management measures and what factors can cause them to fail?

BBTs scored the expected change in each variable (causes, i.e. activities and pressures used in the Bow-tie) on a scale from - 3 (strong negative change) to +3 (strong positive change) under the three scenarios

Downscaling completed by almost all BBTs (BBT1 and BBT7 missing)

33

Downscaling scenarios into Bow-ties

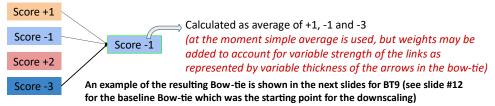

Scenario scoring transferred into Bow-tie graphically using colour scale

Do	D/S score		
+3	+3		
+2	Medium	positive change	+2
+1	Weak	Change	+1
0	0		
-1	Weak	negative	-1
-2	Medium	change	-2
-3	Strong	Change	-3
			n/a

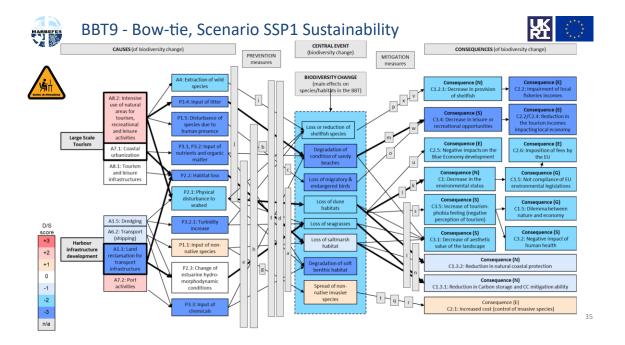

- For causes (activities & pressures), colour reflects the score given by the BBT
- For other elements of the Bow-tie, colour reflects the average of the scores allocated to the previous connected elements

34

Re-cap: Recipe for tackling the problem and identifying opportunities:

- Define the central problem and the framework for opportunities
- Create risk- and opportunity-based generic Bow-ties with Drivers and Activities
- Analyse previous experience, projects and literature
- Incorporate the 10-tenets for management responses
- Produce a 'strawman' for discussion with stakeholders
- Refine and produce the site- and topic-specific Bow-ties
- Interrogate Bow-Ties to show the gaps and opportunities for nature and society
- Interrogate Bow-Ties to show the gaps and opportunities for science and management
- Downscale the high-level IPCC scenarios to be relevant to local issues

(Photo. Lauren McWhinnie, UVIC workshop, 2018)

STAKEHOLDER WORKSHOP

Benefits of engaging with these tools...

- Reduce the complexity of a holistic, multi-sector approach to marine environmental management challenges
- Contribute local knowledge to inform the model, enhancing its practical applicability
- Allows the practitioner to identify points in the system where management measures will be effective
- Contribute to the development of these tools to ensure they are fit for purpose and suits your needs as a stakeholder .

And now you have carried out all the management, assessment and reporting:

Ocean and Coastal Management 265 (2025) 107623

Contents lists available at ScienceDirect

Ocean and Coastal Management

Review

Managing marine resources sustainably – But how do we know when marine management has been successful?

Michael Elliott a,b,* o, Ángel Borja c, Roland Cormier d

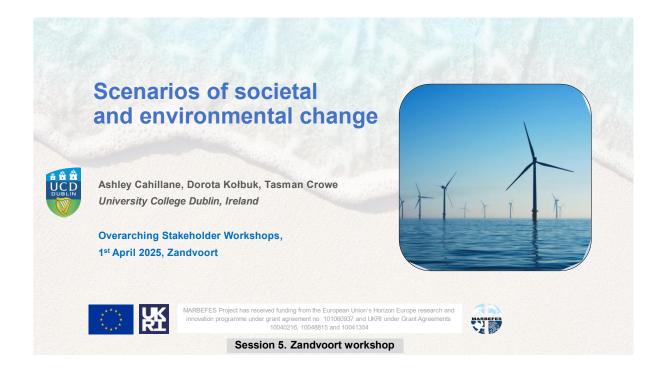

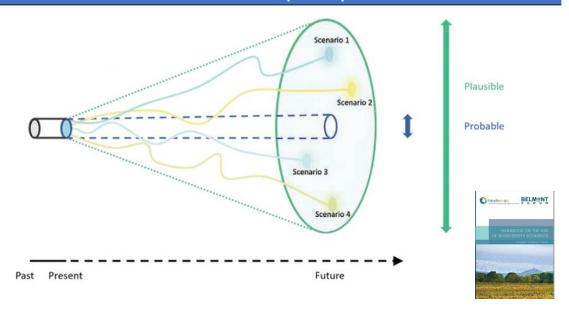

Appendix 3c. Scenarios of Societal and Environmental change under SSP1, SSP3 and SSP5

Scenarios enable us to explore possible futures

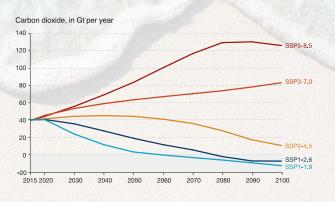

What are scenarios?

Scenarios are internally consistent socioeconomic, emissions, and climate projections

Common in large-scale management strategies, e.g.: IPCC assessments, where they support:

- Climate modelling: how different levels of greenhouse gas emissions may influence global temperatures, sea -level rise, etc.
- Policy development: potential outcomes of various emission pathways help policymakers in crafting strategies to reduce emissions and prepare for anticipated impacts.

SHARED SOCIOECONOMIC PATHWAYS

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Which scenarios are being used in MARBEFES?

In MARBEFES, scenarios can be used to describe possible futures of coastal and marine ecosystems.

Three scenarios selected for the project are:

Sustainability (SSP1):

- Global shift toward a more sustainable path, respect for perceived environmental boundaries.
- Management of the global commons slowly improves; educational and health investments.
- Emphasis on **human well-being** rather than economic growth.
- Inequality is reduced both across and within countries.
- Consumption is oriented toward low material growth and lower resource and energy intensity.
- · High level of international cooperation.

5. TAKING THE HIGHWAY

Which scenarios are being used in MARBEFES?

In MARBEFES, scenarios can be used to describe possible futures of coastal and marine ecosystems.

Three scenarios selected for the project are:

Regional rivalry (SSP3):

- Politically-driven focus on domestic or, at most, regional issues.
- Investments in education and technological development decline.
- Economic development is slow, consumption is material-intensive, and inequalities persist or worsen over time.
- Population growth is low in industrialized and high in developing countries.
- A low international priority for addressing environmental concerns leads to strong environmental degradation in some regions.

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Which scenarios are being used in MARBEFES?

In MARBEFES, scenarios can be used to describe possible futures of coastal and marine ecosystems.

Three scenarios selected for the project are:

Fossil-fuelled development (SSP5):

- Competitive markets, technological innovation and participatory societies. Rapid growth of the global economy.
- Strong investments in health, education, and institutions to enhance human and social capital.
- But: exploitation of abundant fossil fuel resources and the adoption of resource and energy intensive lifestyles around the world.
- Local environmental problems like air pollution are successfully managed, but: delayed global climate action

nd we luck into "rapid technological progress" that dvances sustainable development)

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Downscaling - making broad scenarios relevant to specific places

- 1. Each BBT developed a bow-tie with a central problem (biodiversity loss-related)
- BBTs selected relevant activities and pressures driving central problems (e.g. renewable energy
 generation, tourism and leisure, transport by shipping, etc. terms are standardized across BBTs) and
 assess if they will increase or decrease under each of the three scenarios
- Changes estimated from -3 (big decrease of activity/pressure) to +3 (big increase of activity/pressure)

E.g. Menorca

PRESSURES A6.2 BIOLOGICAL PRESSURES P1.1 Input or spread of non-indigenous species P1.5 Disturbance of species (e.g. where they breed, rest, feed) due to human presence -3 0 PHYSICAL PRESSURES P2.1 Physical disturbance to seabed (temporary or reversible) -2 P2.2 Physical loss (due to change of seabed morphology or extraction of seabed substrate)

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Downscaling was done first by MARBEFES researchers and then with stakeholders

E.g. Sardinia

Irish Sea

Useful feedback from stakeholders, e.g.

- "activity [X] needs to be more specific",
- "fish and shellfish extraction should be separated".
- industrial and small-scale fishing need to be separated".
- "timescales of the scenarios are likely to change the answers"
- "is regional rivalry an intermediate scenario?"

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

What's next?

- Analysis of results from stakeholders from 6 BBTs in progress (report around May)
- · Developing the scenario tool
- Tool will be made available in a dedicated Virtual Research Environment (by LW ERIC),
- Please share your thoughts on the proposed tool:

Scan this QR code or go to **menti.com**and use code **61415165**

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

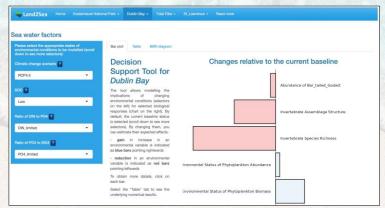

What's next?

Relevant tool was developed in the Land2Sea project (4 locationsin Sweden, Ireland, Germany and Canada)

https://esdecide.shinyapps.idLand2Sea_DST/

This example shows how certain parameters (e.g. invertebrate species richness) will change under: RCP4.5 intermediate scenario + low sediment organic carbon (SOC) + low DIN/PO 4 + low PO 4/SiO2

If you have any questions, please contact:

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Appendix 3d. Acceptance and options for governance: the PESTLE approach

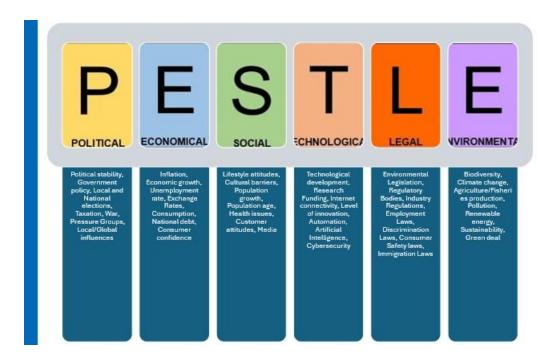

Session 6. Zandvoort workshop

Program

- 13:30-13:45 Introduction to the exercises and instructions
- 13:45-14:10 Individual questionnaire for Options for Coastal Management
- 14:10-15:00 Group exercise for the acceptance of the different pathways to management
- 15:00-15:15 Presentation of the Group Results and Discussion
- 15:15 Endof session

Appendix 3e. Estimating effects of management and policy measures by means of SES models

Appendix 3e.1. Models measures and representation in DSS

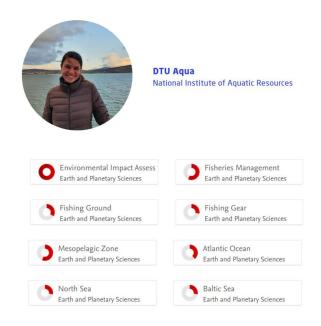

T5.3: Models, measures and representation in the DSS

Mentimeter questions

T5.2: Scoping a marine corridor for Macaronesia

Mentimeter questions

Socio-ecological systems: Models and measures

Berthe M. J. Vastenhoud & David Lusseau

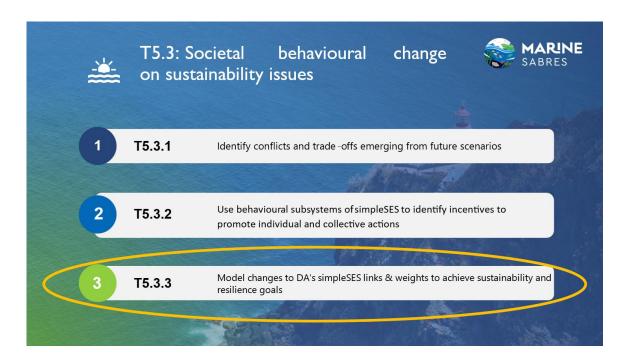

Postdoctoral researcher, DTU Aqua bmjv@aqua.dtu.dk

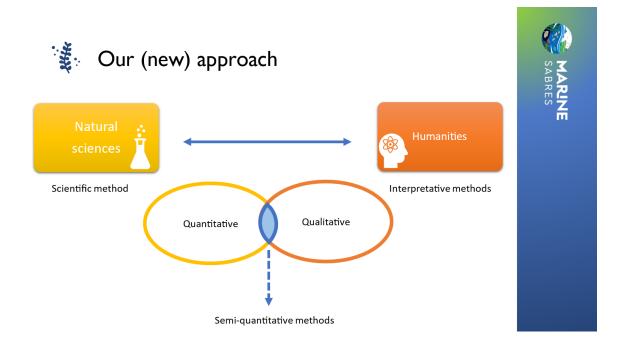

Feed code to T6.3 for DSS

Work with DAs for tailored solutions

Validate assumptions

Sustainability of the system

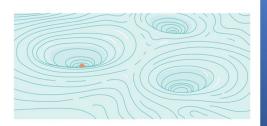

System behaviour

Are the desired outcomes (elements) sustained or improving in time?

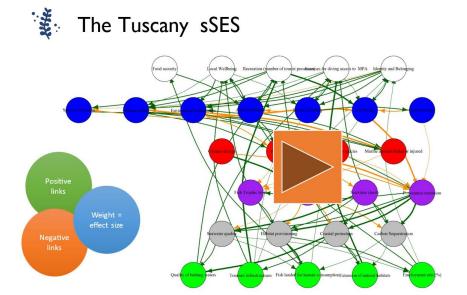

Importance of network components

Identify the most important components in the fate of the network

Interesting targets for application of management measures

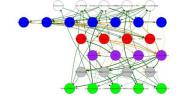

Test different management measures

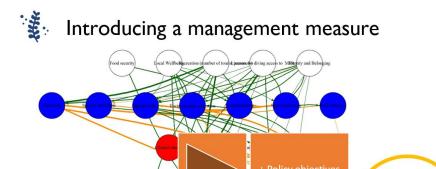

- The system is generally **unsustainable**
- Activities (Boat moorings) and Goods and benefits (P. oceanica extension) are cycling out of phase
- Sensitive to Marine Process and Function (P. oceanica extension) and Ecosystem services (Seawater clarity)

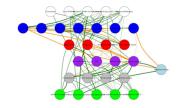

Introducing a management measure

- **Policy objectives:**
 - *P. oceanica* extension
 - Estension of natural habitats
- The system is generally sustainable
- Strong negative effect of the intervention on 'Anchoring' will lead to achievement of all policy objectives and sustaining of all Goods and Benefits

Appendix 3e.2. Scoping a marine corridor for Macaronesia

Setting the scene

- Macaronesia is a biodiversity hotspot with overlapping ecological and geopolitical frontiers
- A marine corridor could be a high-impact intervention to connect, protect, and manage marine biodiversity across boundaries
- With BBNJ, 30x30, and EU Biodiversity Strategy, policy momentum exists — but what would this potential corridor actually entail?

Task 5.2 Economic Opportunities and Costs

Objectives:

- Assess the the scale of potential impacts from management scenarios in the DAs
- Provide evidence-based advice to policymakers on the consequences (costs, risks and benefits) of different interventions to reach stated scenarios
- Use a stepwise economic impact assessment framework to analyse responses, using evaluation criteria

What is an ecological corridor?

- CBD Legal Definition (Kunming-Montreal Global Biodiversity Framework, 2022):
 "A clearly defined geographical space that is governed and managed over the long term to conserve or restore connectivity between protected and other effective area -based conservation measures (OECMs), ecosystems, and important habitats."
- Scientific Perspective:

Corridors are tools to counter habitat fragmentation, support migratory species, and increase ecosystem resilience to climate and anthropogenic pressures. In the marine context, they can link MPAs, support gene flow, and ensure spatial continuity of ecological functions (Hilty et al., 2020; Dudley et al., 2009).

- Key Characteristics
 - Facilitates species movement, life -cycle completion, flow of ecological processes
 - · Reduce isolation of and enhance connectivity between habitats
 - May include seasonal, multi -use, or no-take zones
 - Require adaptive governance and cross -jurisdictional cooperation

A pragmatic, hypothetical scenario focused on:

- Scoping a corridor vision that is adaptive, politically and economically acceptable, and grounded in scientific evidence - but open to creative thinking and incremental steps
- Taking into account political and institutional groundwork (OSPAR, RFMO, IMO, EU, national levels)
- Identifying and gathering available data and knowledge gaps, stakeholder positions, barriers (e.g. legal uncertainties, enforcement concerns, etc.)
- Exploring feasibility and trade-offs what would a corridor need to look like to be plausible, meaningful, and effective?

Aims and objectives of the marine corridor

Overall aim: Safeguard the ecological connectivity among European archipelagos of Macaronesia

Ecological objectives: contribute to a good conservation status of migratory species and the resilience of marine ecosystems

Socio-political objectives: Promote regional and transboundary cooperation, explore new governance approaches, support blue economy transitions

Multi-options approach:

- · Soft corridors? (e.g. shipping measures: zoning, blue -label incentives)
- (Partial) strict protection? (e.g. no -take zones)
- ABNJ focus? EEZ-adjacent? Stepwise expansion?

Scoping exercise

- Geographic scope: Northeast Atlantic Ocean. Macaronesia EEZs: Azores (North limit), Madeira and Canaries (South limit) and their vicinity (including ABNJ)
- Target species and habitats: (e.g. cetaceans, seabirds) with known movement patterns, sea-bottom features like seamounts
- Ecological criteria: migratory routes, connectivity between existing MPAs, key biodiversity areas, etc.
- Protection levels: could vary across zones based on ecological value and current use
- Measures could include:
 - Lighting regulations (e.g. dimmed ship lighting zones)
 - · Speed restrictions

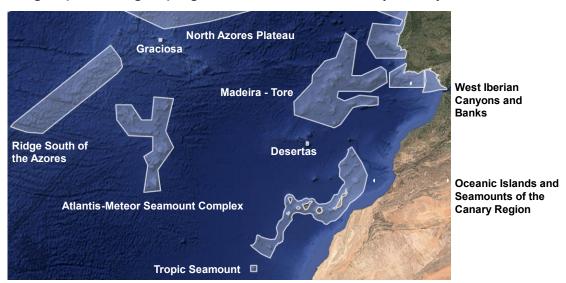

Pathways for implementation

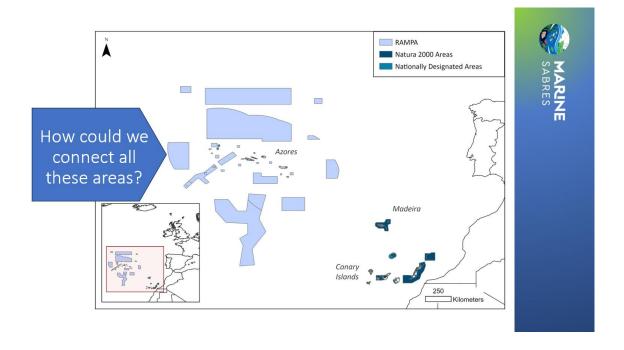

Existing protection frameworks:

- Natura 2000 (within EU waters): Includes Special Areas of Conservation (SACs) using zoning (conservation, restoration, transition zones) and assigning priorities for key habitats and species
- OSPAR MPAs in the North-East Atlantic, including some areas beyond national jurisdiction (ABNJ)
- EBSAs (Ecologically or Biologically Significant Marine Areas) identified under the CBD framework

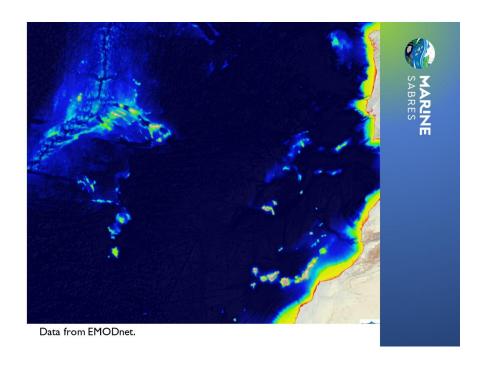

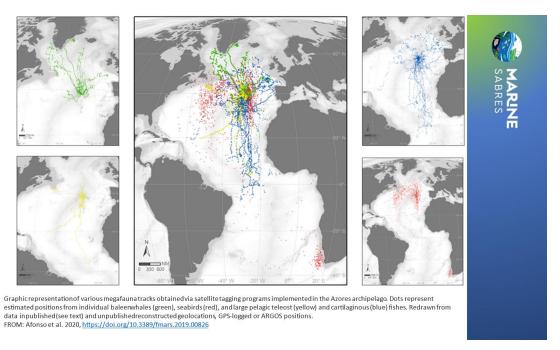

Ecologically or Biologically Significant Marine Areas (EBSAs)

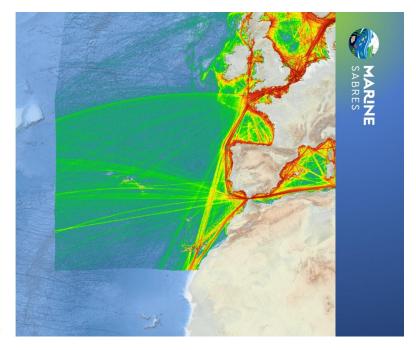

Other areas of relevance for marine ecosystems and biodiversity: Seamounts. Sea-bottom topography.

Interactions with human activities such as maritime traffic. Vessel density

Data from EMODnet.

Expected Benefits & Trade-Offs:

Ecological benefits:

- Improved connectivity between archipelagos and MPAs
- Recovery of migratory species (e.g. tuna, sharks, cetaceans, turtles)
- Enhanced resilience of marine and coastal ecosystems

Socio-economic benefits:

- Boost for sustainable tourism (e.g. whale watching, diving)
- Long-term support for fisheries via spillover and stock recovery
- Research opportunities on connectivity and ecosystem function
- Potential financial incentives for compliant sectors (e.g. tax breaks)

Potential trade-offs:

- Adaptation of maritime transport
- Restrictions of future coastal/offshore wind siting
- Displacement of marine activities (e.g. fishing, marine traffic), with associated costs

Challenges & barriers

- · Legal complexity in ABNJ, requiring multi-level coordination between states and international bodies (e.g. OSPAR, IMO, RFMOs)
- Enforcement and compliance challenges, particularly across jurisdictional boundaries
- Political instability or institutional turnover may delay agreements or disrupt
- Sectoral conflicts
- Data gaps on habitat use, and ecological thresholds especially under climate change
- Shifting migratory patterns may render existing data obsolete without adaptive management

Appendix 3f. Governance: of marine ecosystems: Stakeholders' perspectives

Governance of marine ecosystems: Stakeholders' perspectives

From challenges to solutions

Task 1.2 Regulatory framework for policy and management Léa Ricard, Sabine Cochrane, Charlotte Weber Akvaplan-niva, Norway

April 2025

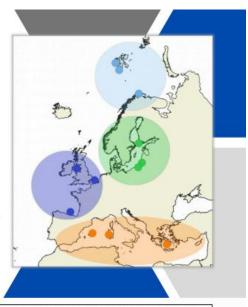

Objective:

- Collecting the stakeholders' perspectives on marine biodiversity governance
- One day workshop in all the case studies
- As a photography of the coastal territorial identity

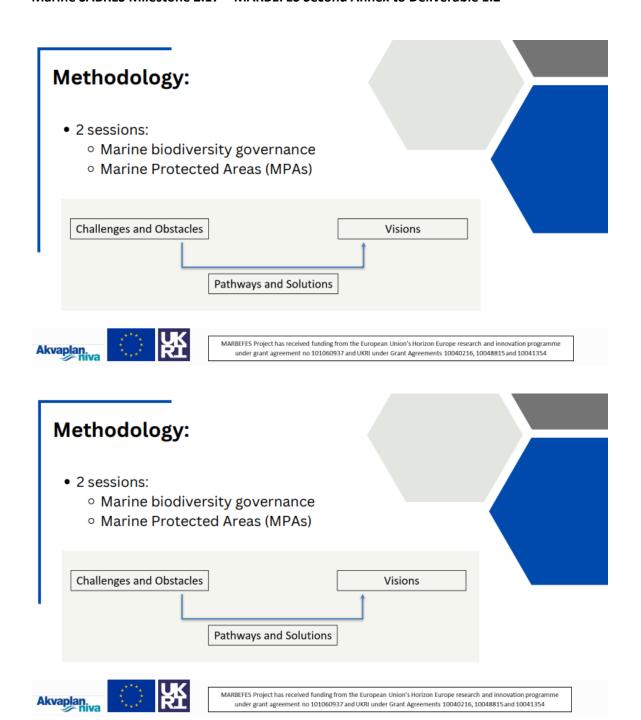

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

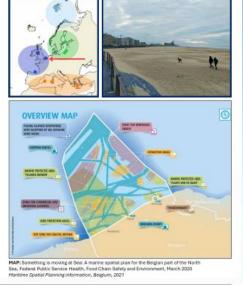

MARBEFES Project has received funding from the European Union's Horizon Europe research and Innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Belgium: Dogger bank

Workshop in Ostend, 09/12/24

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Belgium: Dogger bank

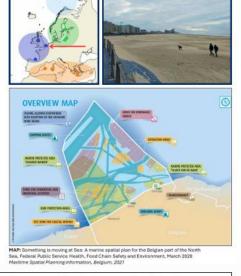

Workshop in Ostend, 09/12/24

Challenges highlighted by stakeholders:

- · Marine Spatial Planning challenges
- · Pollution of the marine waters and the coasts
- Policy fragmentation
- · Erosion of territorial identity in Ostend

Visions and Pathways:

- Communication on collective awareness
- · Citizen science projects with schools
- · Fisheries: centralised group
- · Pollution: more power to local police

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Spain: Southern Gulf of Biscay

Workshop in Santander, 17/12/24

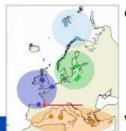

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Spain: Southern Gulf of Biscay

Workshop in Santander, 17/12/24

Challenges highlighted by stakeholders:

- Impacts of climate change on marine ecosystems, fauna and flora
- · Pollution of the marine waters
- Morphological modification / sediments

Visions and Pathways

- · Conservation and restoration of habitats
- Stronger management and control on alien species
- · Increased of research fundings

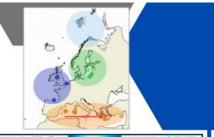

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Crete, Greece: Gulf of Heraklion

Workshop in Heraklion, 06/02/25

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programs under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Crete, Greece: Gulf of Heraklion

Workshop in Heraklion, 06/02/25

Challenges highlighted by stakeholders:

- · Exponential urban development and human pressure with tourism
- · Climate change and invasive species
- · Fish prices
- · Lack of efficient institutionnal frame
- Visions and pathways
- · Share best practices, and more spatial planning
- Quantification and monitoring of invasive species
- · Find a way to use the invasive species

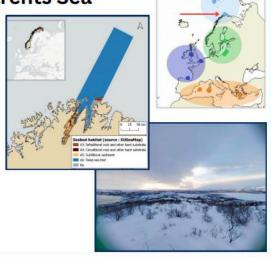

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programm under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Norway: Porsanger fjord-Barents Sea

Workshop in Lakselv, 17/02/25

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Norway: Porsanger fjord-Barents Sea

Workshop in Lakselv, 17/02/25

Challenges highlighted by stakeholders:

- · Top-down approach
- · Tourism fishing
- · Industrial fisheries depropriation feeling
- Invasive species
- · Fish farming local controverse

Visions and pathways

- · Local knowledge taken into account
- · Regulations regarding catch and release practices
- · Place specific regulations for fisheries
- · Keep working on ecosystems restorations projects

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

What to take away from this?

Main questions raised in all the areas:

- · Fragmentation of policy and articulation of geographical scales
- · Invasive and alien species with impacts on ecosystems and fisheries
- · Tourism regulation
- BUT: the study first aims to take into account the singularity of each location, with its own characteristics, dynamics and concerns
- · And now? Complete analysis on process

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354 Appendix 3g. The MARBEFES Toolbox

Appendix 3g.1. Introduction to the Toolbox

MARBEFES tools

30 + tools developed and being tested 12 study areas – 2 external areas

Tools for:

- · Expanding knowledge
- Assessing environmental issues
- Identifying social and economic issues
- Innovation in data collecting/ analysis
- Making decisions

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

Toolboxes:

- how does yours look?

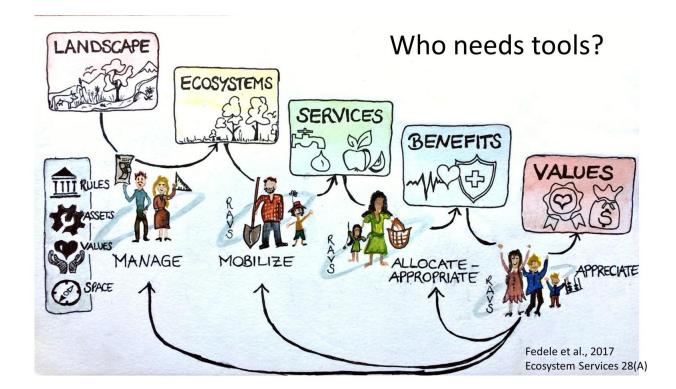

What is a tool?

- A physical thing/ measuring device
- A guidebook/instruction manual
- Species identification technology
- Data analysis method
- Citizen science
 - Eg data collection, observations

Who are the stakeholders?

- · Research and education
 - Universities, schools etc.

- Society
 - Public groups, spiritual/religion, cultural heritage etc.

- Industry/commerce
 - Industry, retail, hotels, tourism etc.

- Governance
 - Local/regional regulatory authorities

For Education

researchers, educators, students

For Society

communities, interest organisations

For Business

entrepreneurs, industry, commerce

For Governance

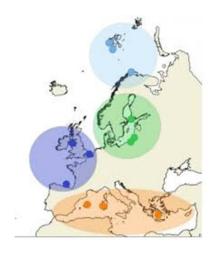

regulators, managers, policy-makers

Welcome to the MARBEFES Toolbox

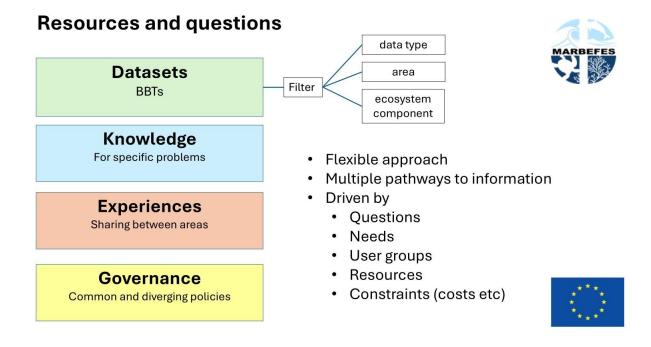

Here you find a selection of methods, approaches and guidelines for assessing the relationships between

- Nature
- Society
- Economy

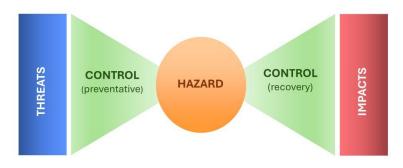

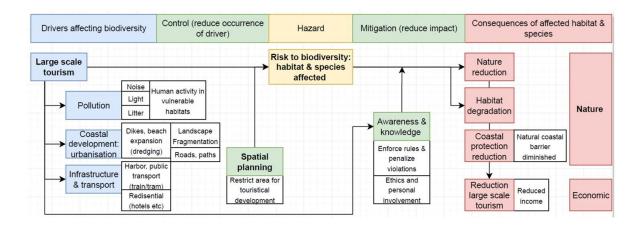

Challenge: how to assess the issues?

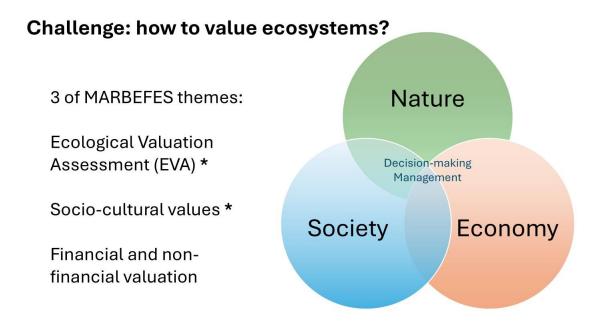

Conceptual visualisation of risks & consequences – and appropriate management actions

"Bow tie" analysis

Example: Large-scale tourism

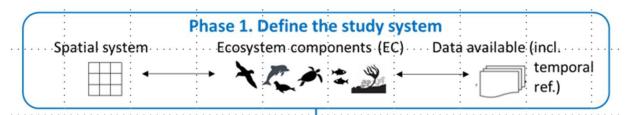

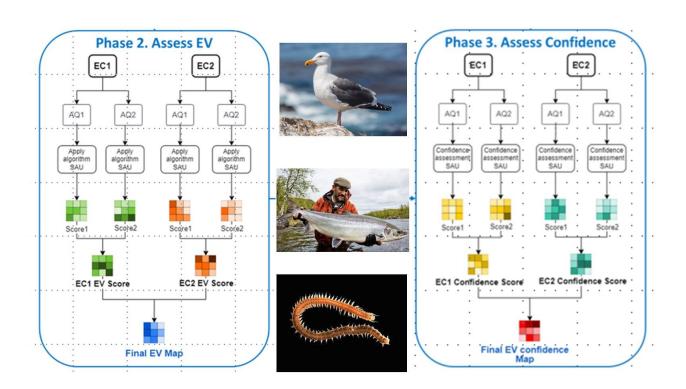

Example: Ecosystem Valuation Assessment

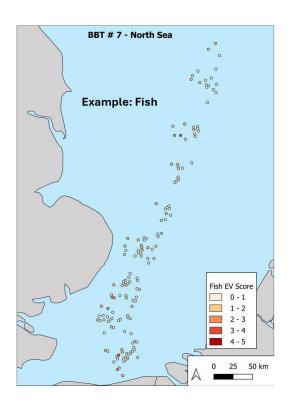

Aim – give a value to individual components – and then overall

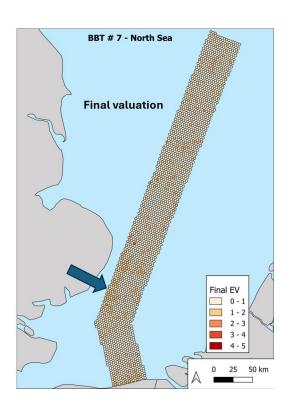

Who for? - Researchers, marine planners, industry, fisheries management, public...

How?

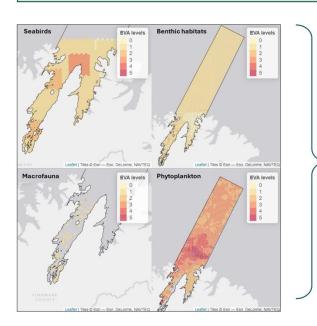

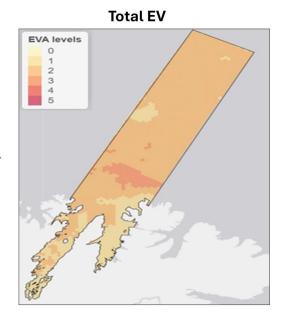

Example: Ecological Value Assessment (EVA) North Norway

Appendix 3g.2. Toolbox design

What should the Toolbox website be like?

Go to Toolbox prototype

Session 9b. Zandvoort workshop

Appendix 3g.3. Broadscale biological traits

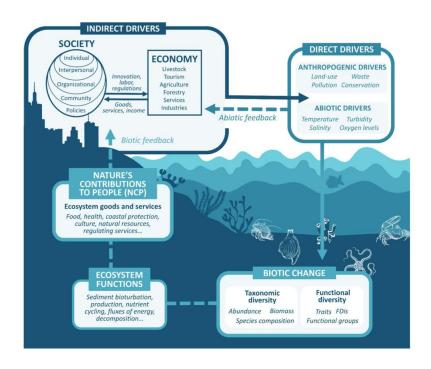

Marine biodiversity and ecosystem functioning leading to ecosystem services

Marie C. Nordström University of Helsinki, FIN Clement Garcia Cefas, UK

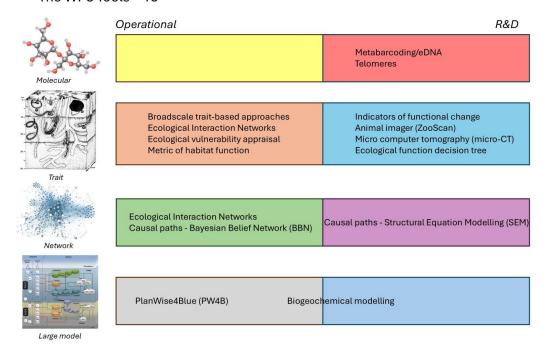

Zandvoort 02.04.2025

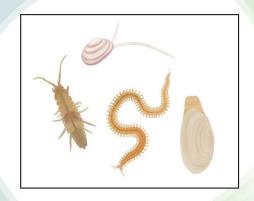

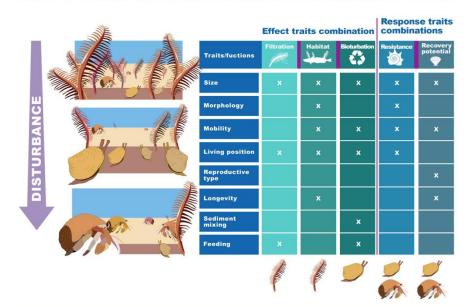

The WP3 Tools - 15

TOOL: Broadscale biological traits

- Aim: to describe (functional) diversity
- Species characteristics that describe the ecological role of the organism

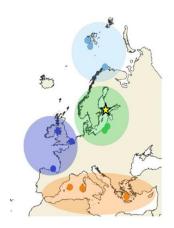

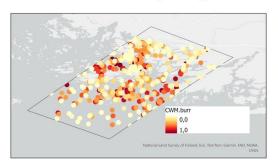

MULTIPLE TRAITS AND RELATED FUNCTIONS IN BENTHIC ECOSYSTEMS

Broadscale biological traits – Finnish Archipelago Sea

Broadscale biological traits – Finnish Archipelago Sea

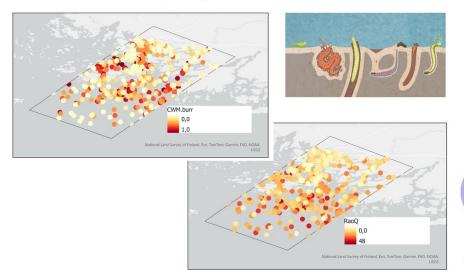

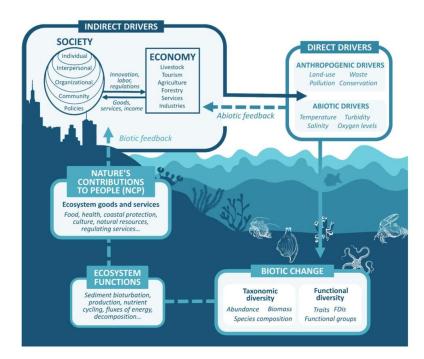

Broadscale biological traits – Finnish Archipelago Sea

Appendix 3g.4. Metric of habitat function

TOOL: Metric of habitat function

- Aim: to quantify and map functioning across habitats in an area
- Ecosystem functions are the biological, geochemical and physical processes that take place within an ecosystem – feeding into ecosystem services

Workflow for developing the Metric of habitat function

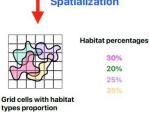

Marine habitat information

- Habitat maps (EUNIS 2022)
- Oceanographic cruises
- · Underwater services

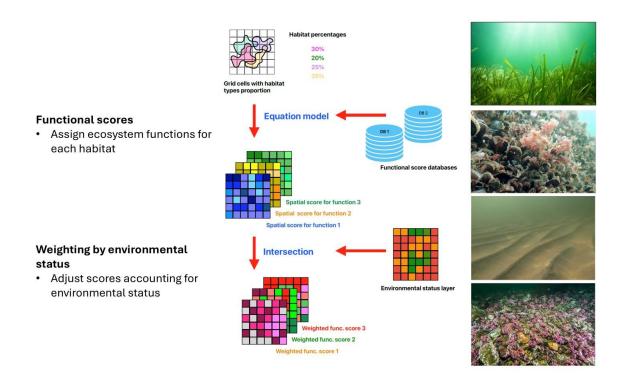

Habitat distribution Habitat 1 Habitat 2 Habitat 3 Habitat 4 Spatialization

GIS layer creation

- Habitat presence/absence
- Hexagonal grid
- · 1 km resolution

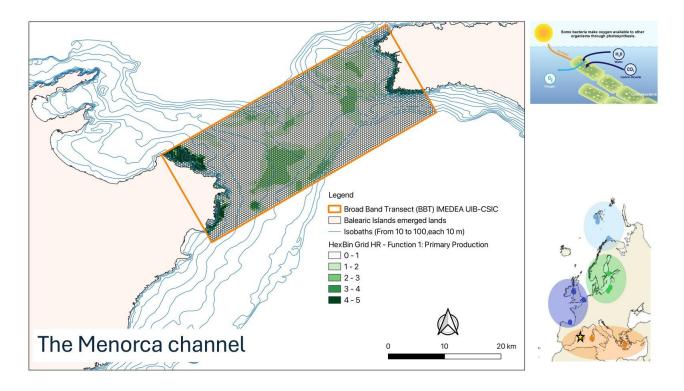

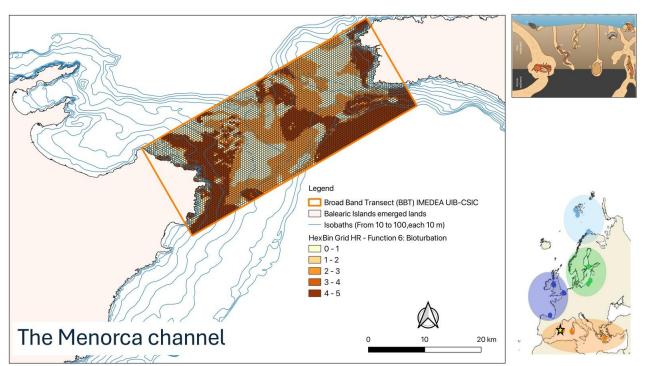

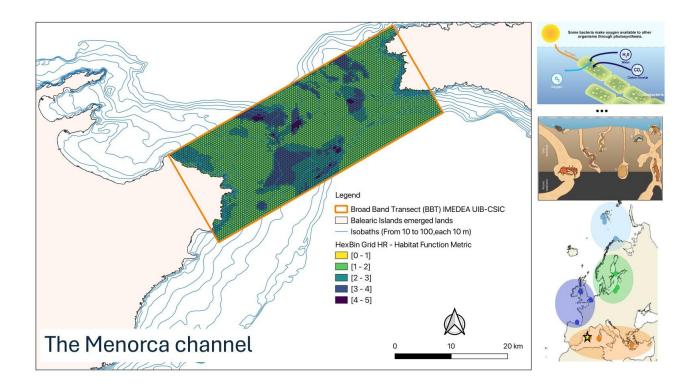

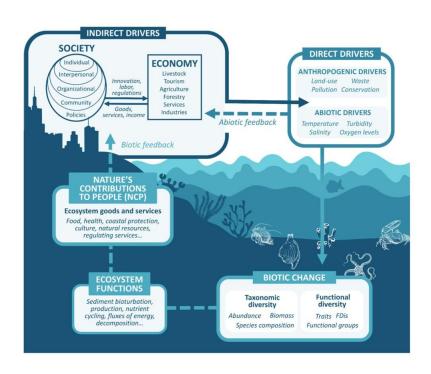

Metric of habitat function – the Menorca channel

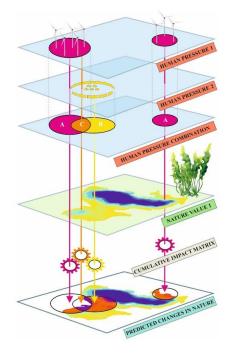

The tools provide knowledge for decision support

- Combines layers of nature values and human pressures
- Uses evidence of how human pressures affect nature values
- Helps us understand trade-offs

Thank you on behalf of all tool developers in WP3!

Appendix 3h. Tools & Stakeholders

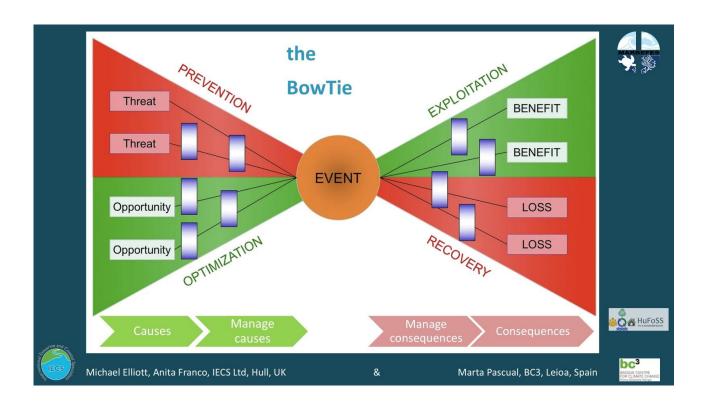

Appendix 3h.1. Appreciation of some tools

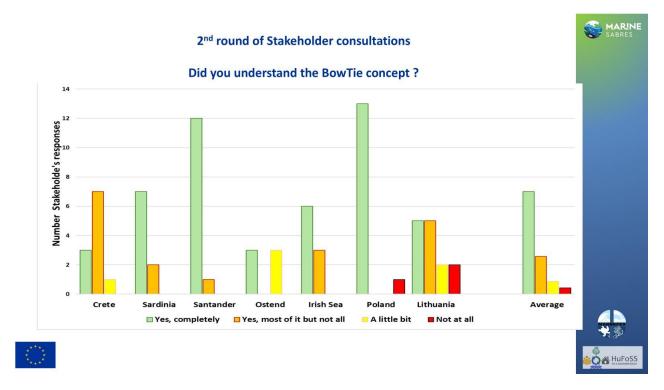

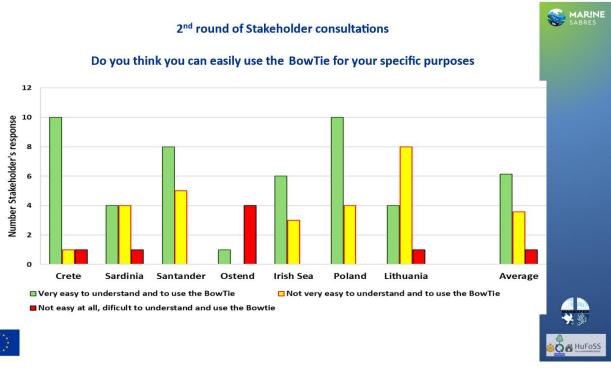

Marine SABRES is funded by the European Union's Horizon Europe programme under grant agreement No.101058956

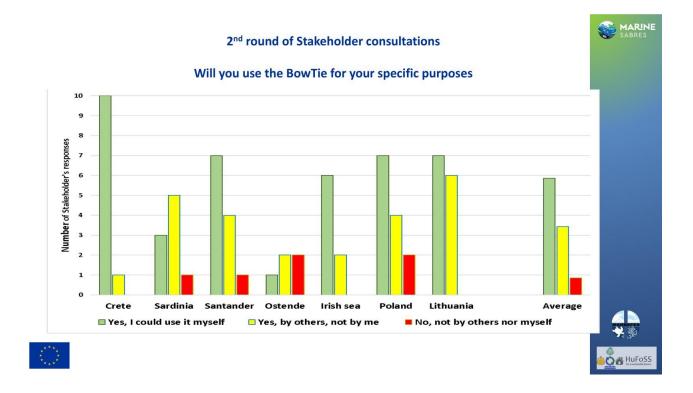

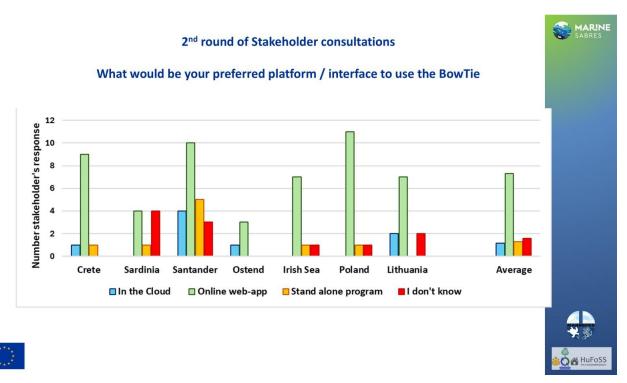

MARBEFES has received funding from the European Union's Horizon Europe research and innovation programme under Grant Agreement no 101060937

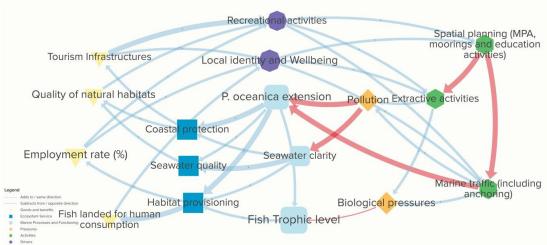

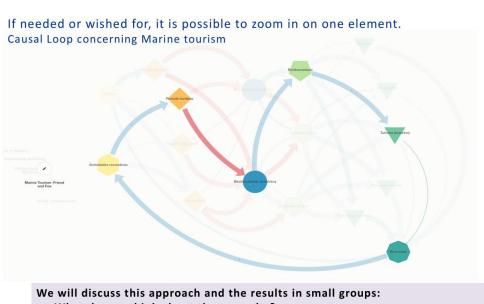

<u>A Causal Loop diagram</u> includes several elements, based on cause-consequence relationships

This approach will also be used and shown in the afternoon (the Shiny-App)

- What do you think about these results?
- Are there other elements to be added

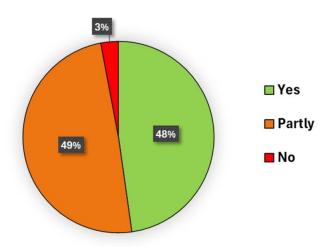

You can insert your answer also in the Mentimeter that will follow after the discussion

2nd round of Stakeholder consultations

Are to your viewpoint in the Causal Loop Diagram the essential elements included

Other tools In the MARBEFES Tool-Box

Additional tool 1

Hydrodynamic and Biogeochemical modelling tools

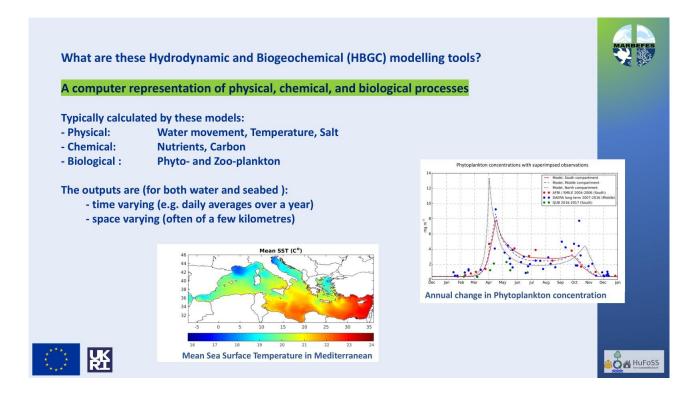

John Aldridge, Rob McEwan, Cefas, UK Burak Kaynaroglu, Klaipeda University, Lithuania Natalia Stamataki, Ioannis Tsakalakis, HCMR, Greece

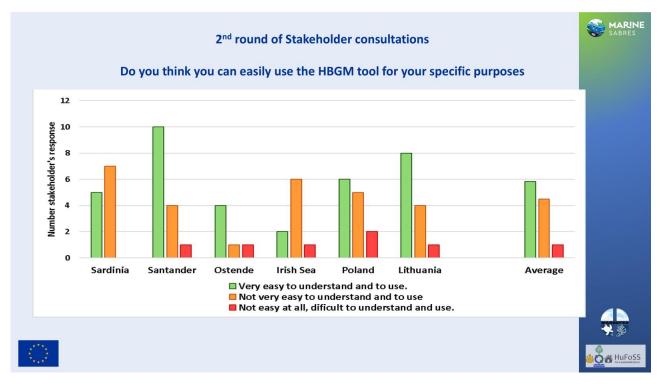

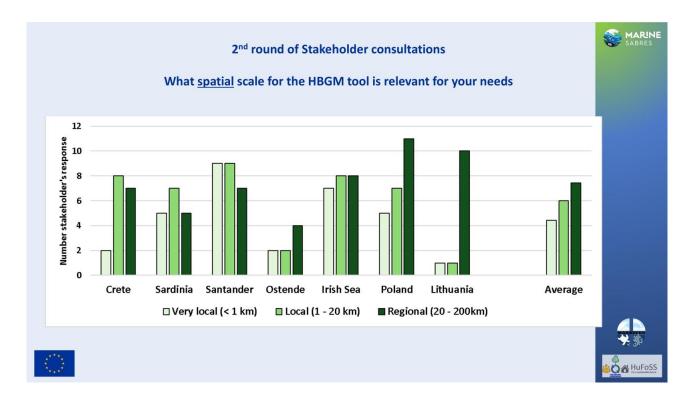

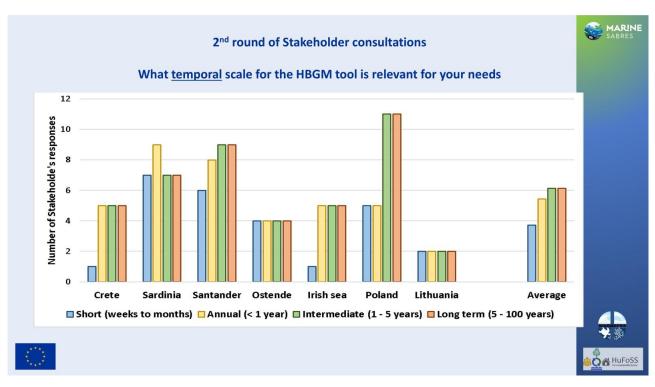

MARBEFES Project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no 101060937 and UKRI under Grant Agreements 10040216, 10048815 and 10041354

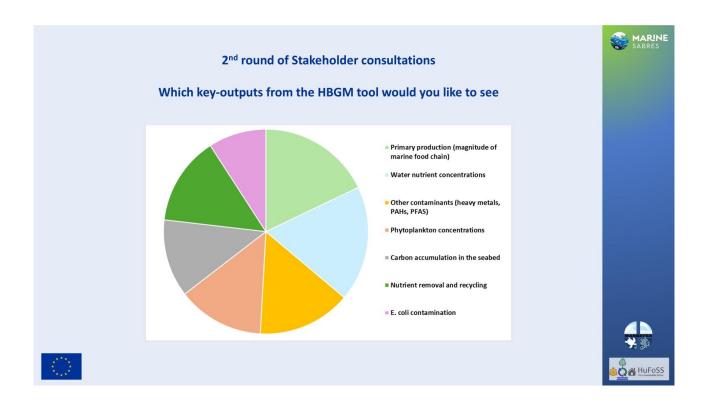

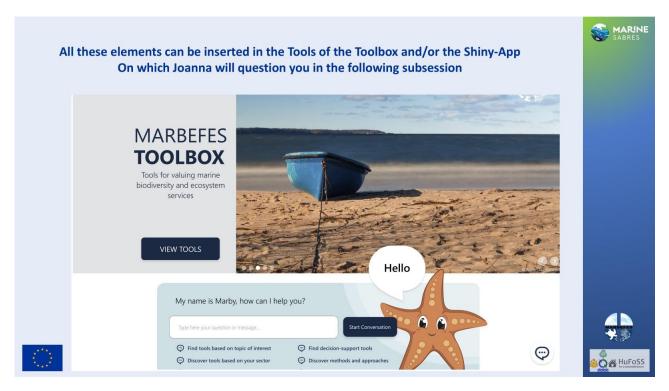

All these elements can be inserted in the Tools of the Toolbox and/or the Shiny-App
On which Joanna will question you in the following subsession

Joanna Piwowarczyk
Institute of Oceanology PAS
Sopot, Poland

What are the most important challenges for the practical uptake of the toolbox?

Please think about this question from the perspective of your own organization but also consider other entities that should or would use it

What could be done to enable a wider use of the toolbox?

Please think about the question from the perspective of your own organization but also consider other entities that should or would use it.

Appendix 3i. Decision Support Systems (DSS)

Appendix 3i.1. Introduction to the decision making and DSTs

Towards the DSS for biodiversity management

What is a decision making process?

- Minzberg et al.(1976)

A decision-making process refers to the series of steps or stages that individuals or groups go through to identify, analyze, evaluate, and choose among alternative courses of action to address a particular problem or achieve a specific goal. The decision-making process can vary depending on factors such as the complexity of the decision, the availability of information, the preferences of decision-makers, and the context in which the decision is being made.

- ChatGPT (2024)

A decision-making process is a systematic series of steps individuals or groups follow to identify, analyze, and choose between alternatives to solve a problem or achieve a goal. It involves gathering information, evaluating options, and selecting the best course of action based on logic, values, and desired outcomes.

- DeepSeek (2025)

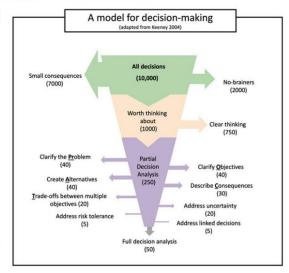

https://www.umassd.edu/fycm/decision-making/process/

Conservation decisions are challenging, especially if resources and capacities are limited

Common questions in conservation decision making

- What actions should be implemented to protect endangered species and ecosystems within a region?
- How can a protected area network be designed to effectively conserve whole ecosystems under a changing climate?
- What actions will protect species and ecosystems while also considering the cultural and livelihood needs of people?
- How should an action be chosen when uncertainty impedes knowledge of the best action?
- When should researching a problem stop and implementation of a solution start?
 Hemming et al., 2022

What is a decision support system(DSS)?

A computer-based system composed of a language system, knowledge system, and problem-processing system whose collective purpose is the support od decision making activities

MARBEFES

Holsapple (2003)

A Decision Support System (DSS) is a computer-based tool that helps individuals or organizations make informed decisions by analyzing large amounts of data, identifying patterns, and providing recommendations. DSSs are widely used in business, healthcare, finance, and other industries to improve decision-making efficiency and accuracy.

- ChatGPT (2024)

A Decision Support System (DSS) is a computer-based tool or software application designed to assist individuals or organizations in making informed decisions by analyzing data, modeling outcomes, and providing actionable insights. Unlike fully automated systems, a DSS enhances human judgment by offering data-driven recommendations rather than replacing decision-makers.

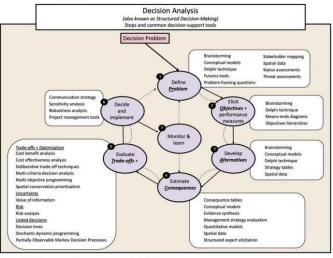

- DeepSeek (2025)

How decision support tools fit into a decision-making process?

decision-making process makes use of different methods and decision support tools. Some are quite common – e.g. brainstorming

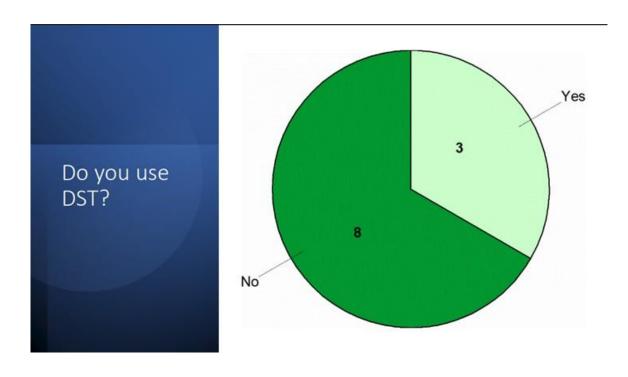

Each of steps (5 or 7) in a

adapted from Garrard et al. (2017)

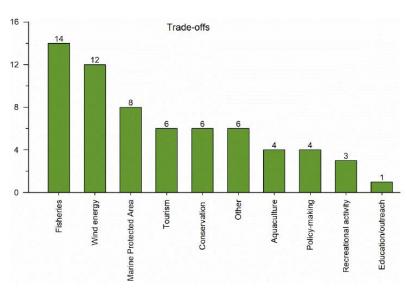

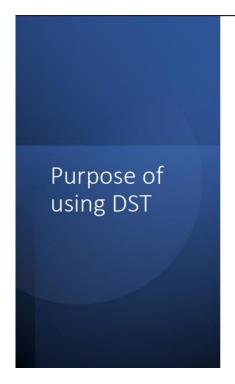

Results of stakeholder consultations

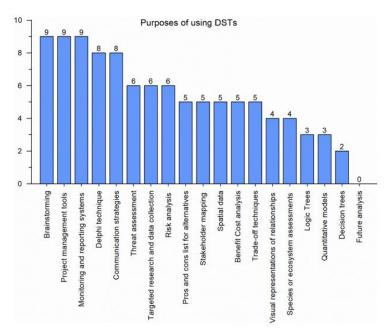

Full report in: Olsen, M.C., Grinienė, E., Laksá, U., Morkūnė, R., Razinkovas-Baziukas, A. 2025. Marine SABRES Decision Support System Design Specification. Marine SABRES Deliverable 6.1

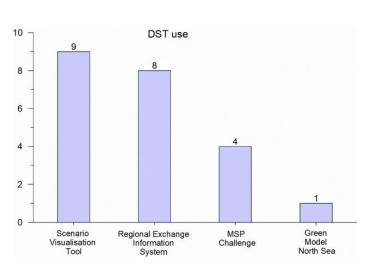

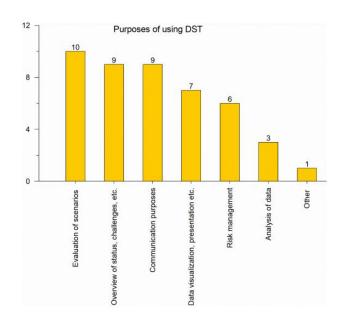

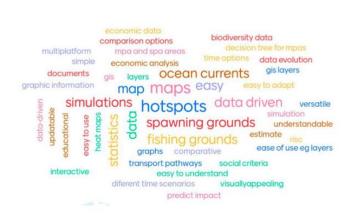

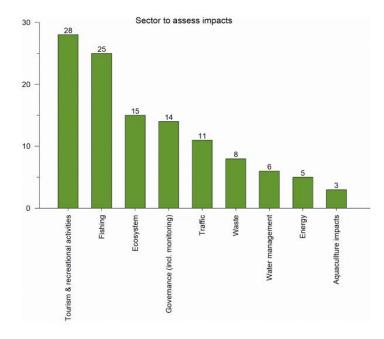

Purpose of using decision support tools

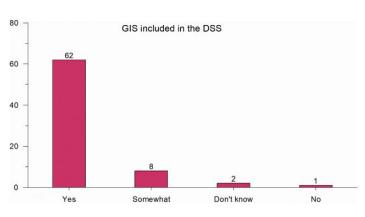

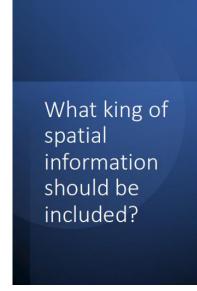

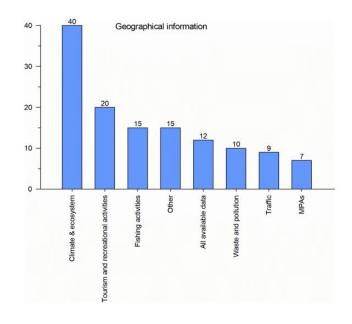

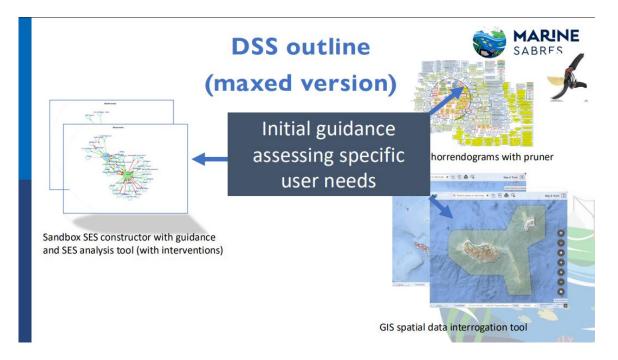

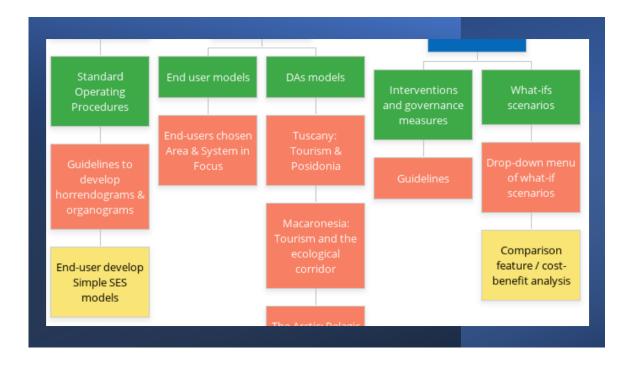

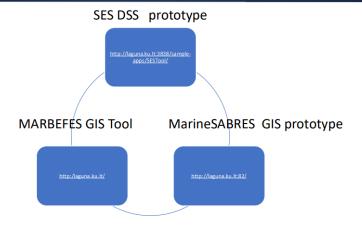

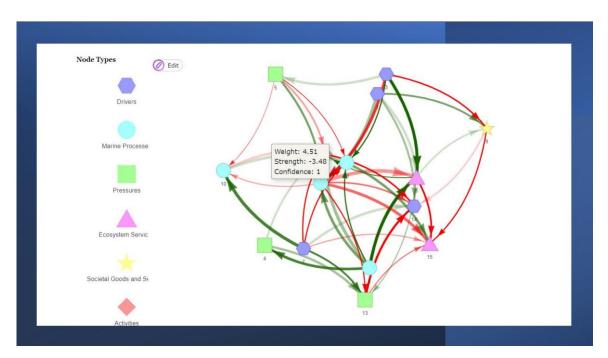

Simple SES Constructor						
Requirement	Description Priority Acceptance Criteria		Acceptance Criteria			
Standardised approach to handling qualitative data sources	Clear methods and approaches for handling qualitative data sources are necessary to avoid oversimplification and to increase trust and transparency in CLDs/models.	High	 Users understand what methods to apply when dealing with qualitative data sources. 			
Standardised approach to assess relationships	Historical data and assessing relationship between indicators, must follow a justifiable & standardised approach.	High	 Users assess relationships between elements following a standardised approach. 			
Easy navigation of models	Users must be able to easily navigate and analyse loops and types of interactions (e.g. balancing and reinforcing loops).	High	 Users can select certain loops, type of relationships, or other information to stand-out on the model. 			
Adjusting elements on the model	The users must be able to change and adjust CLDs/models and horrendograms and organograms on the system, without having to go back to the offline workbooks.	High	 Users can change connection, strength, and confidence level of elements on the system. Users can make changes and updates to horrendograms and organograms. 			
Measures to prevent manipulation of data and results	There must be measures taken to prevent the misuse and manipulation of data and results by e.g. match data, audit logging, etc.	High	- Measures are incorporated into system to prevent misuse of manipulation of data, and thereby, results.			
Data gaps	In most regions, data availability and high-quality data of indicators are limited – understanding these limitations must be communicated to and understood by users.	High	- Users understand data limitations in the tools.			
Deep find search control	The DST must allow users to conduct a deep find search of Simple SES (e.g. the travers begins with the first node or element of a graph and repeats until reaching a targeted node or element).	High	 Users can conduct a deep find search of nodes and elements in the CLD models. 			

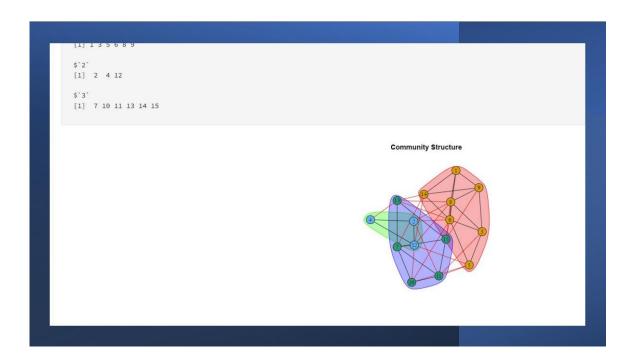

Simple SES analysis					
End users models and analytical functions	All analytical functions of the Simple SES must be responsive to users imported Simple SES models.	High	 The DSS analytical functions are responsive to encuser models, developed in the Simple SE: Constructor. 		
Loops and leverage points	The system must be able to support users in the conducting loop analysis by identifying and listing loops and potential leverage points of user models.	High	Users get a list of loops and potential leverage points from the system. Users successfully identify leverage points in their SES.		
Models and interventions & measures	The system must provide a selection of interventions and measures to simulate the interactions of elements in the Simple SES under different conditions.	High	 Drop-down menu of all interventions and measures to select from. Clear simulation of how each intervention and measure impacts the SES. 		
Models and what-ifs	The system must allow users to conduct what-if analysis on their models and provide users with common what-ifs scenarios to select from.	High	Drop down menu of what-ifs scenarios. Clear simulation of how different what-ifs scenarios impact the SES.		
Comparing interventions and measures	Users should be able to compare interventions and measures, as well as what-ifs scenarios.	Medium	Option to compare different interventions with clear visualisation of the different outcomes. A summary of key changes in the system based on selected what-if scenarios or cost-benefit analyses.		

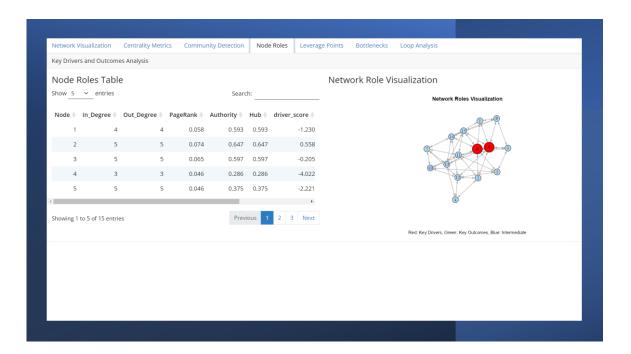

Links to the DST prototypes

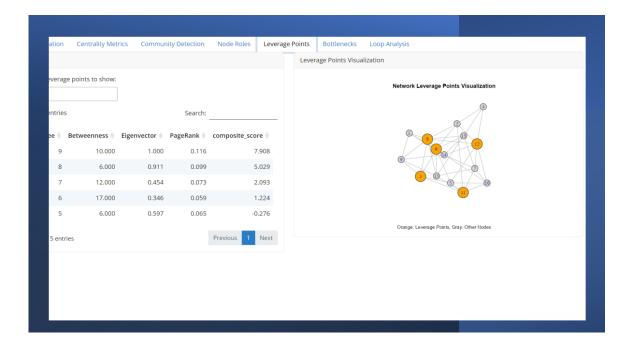

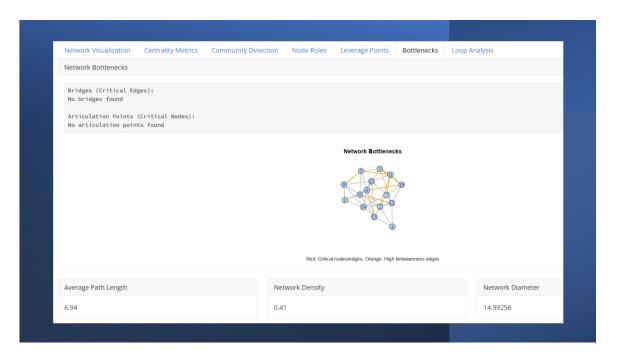

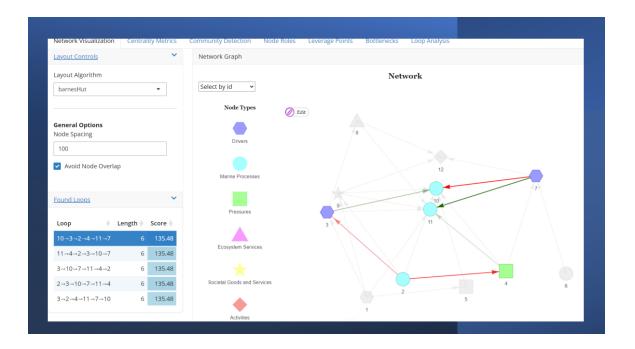

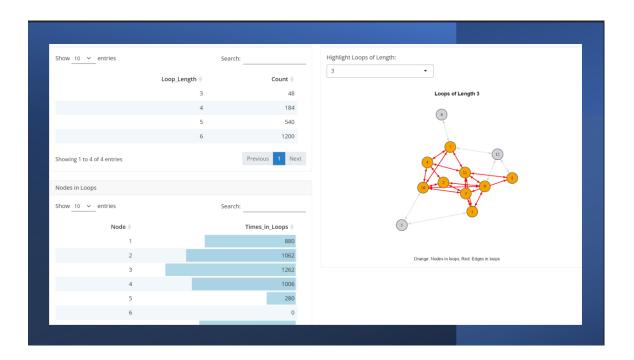

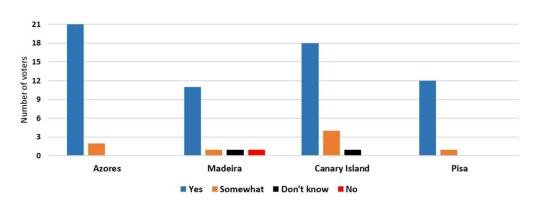

Appendix 3i.2. GIS to Shiny-app

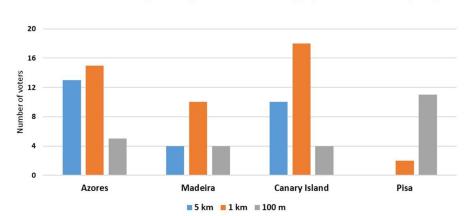

The majority of participants indicated that GIS would be beneficial

2nd round of Stakeholder consultations (by HuFoSS) What would be the optimal spatial scale for Geographic Information (GIS)

On the Islands larger scales of 1 to 5 km are preferred, and on the Mainland a finer scale of 100 m

Appendix 3j. Valuation of Coastal Systems

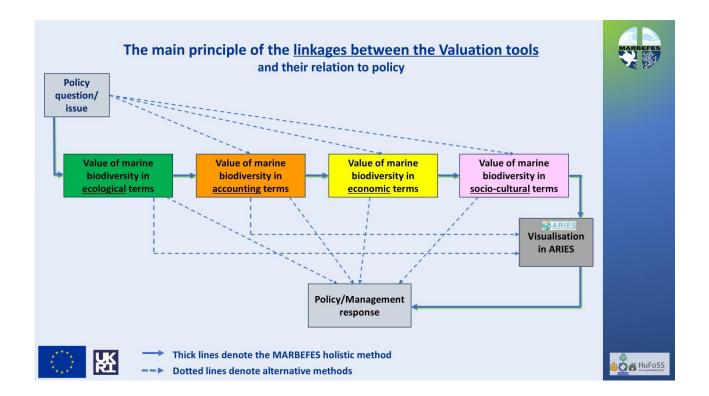

Appendix 3j.1. Valuation systems - introduction

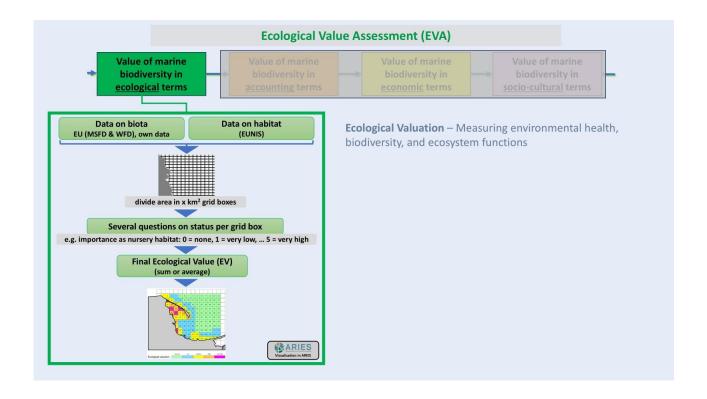

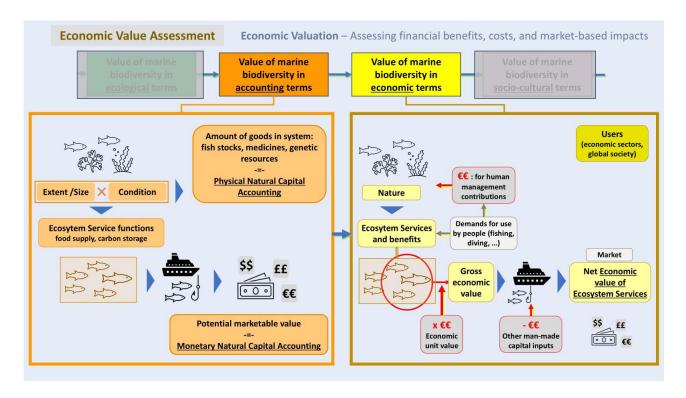

Marine SABRES is funded by the European Union's Horizon Europe programme under grant agreement No.101058956

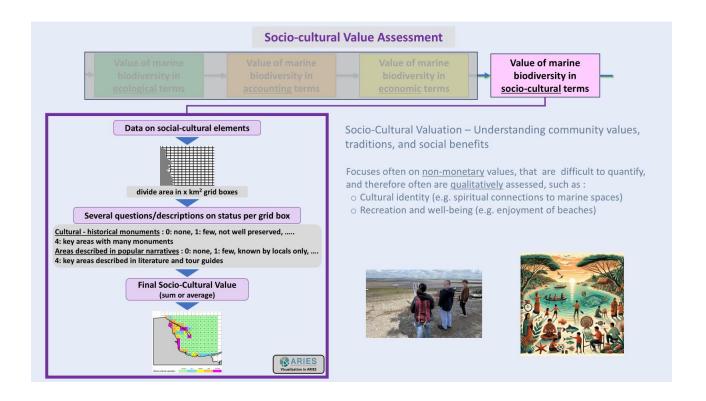

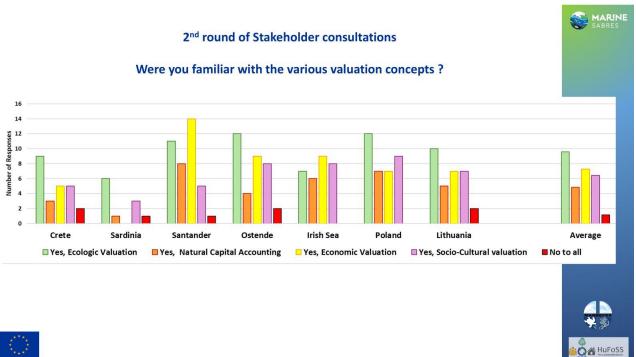

MARBEFES has received funding from the European Union's Horizon Europe research and innovation programme under Grant Agreement no 101060937

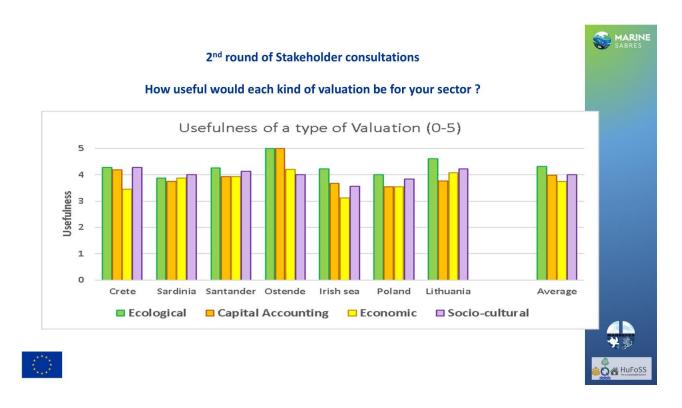

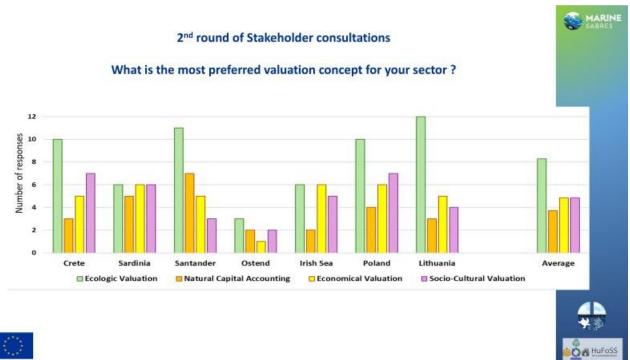

Appendix 3j.2. Socio-Cultural valuation

Session 12b. Zandvoort workshop

Social and Cultural Ecosystem Benefits

WP4 Task 4.2c non-financial valuation of ecosystems

Ashley Cahillane, John Brannigan, Tasman Crowe -University College Dublin

Johanna Forster --- University of East Anglia

MARBEFES project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Cultural ecosystem services and benefits

"the contributions ecosystems make to human well-being in terms of the identities they help frame, the experiences they help enable and the capabilities they help equip"

--Fish, Church, and Winter. "Conceptualising cultural ecosystem services..." (2016)

Produced through **nonlinear**, **relational**, **place-based** interactions between humans and environments.

MARBEFES project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Approach

- · Social perceptions
- Place-based
- Engaging locals, but also visitors, tourists, conservationists, cultural heritage officers, fishers, & more
- Builds on The Cultural Value of Coastlines project (2016-18)

MARBEFES project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Socio-cultural valuation tools

- Online questionnaire (for general public)
- · Participatory mapping
- · In situ observations
- Interviews
- Focus groups
- · Arts-based workshops
- Cultural representations analysis

- --cultural ecosystem services and benefits
- --environmental health
- --environmental changes
- --environmental management

MARBEFES project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Gulf of Oristano, Sardinia

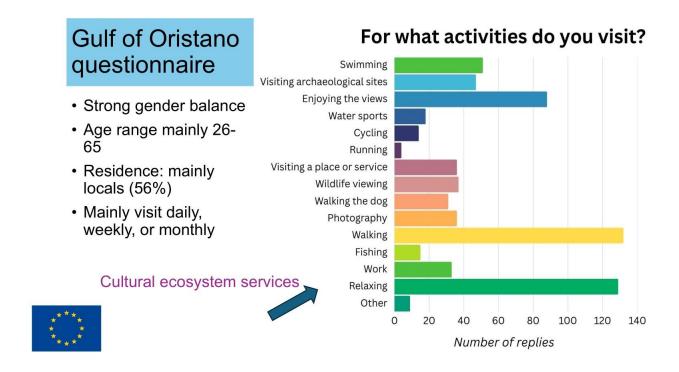

Public questionnaire in Gulf of Oristano, Sardinia

- Gulf of Oristano—home to archeological sites
- WP1 interviews: key factors are (i) sense of place, (ii) awe, (iii) mental & physical health, (iv) relaxation
- July-Dec 2024
- 200 responses

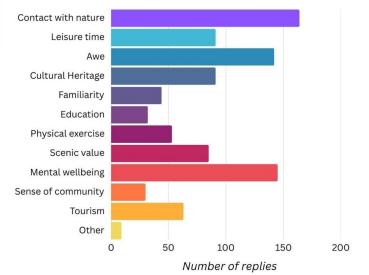

Gulf of Oristano questionnaire

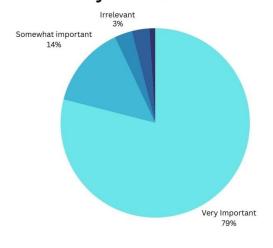

Gulf of Oristano questionnaire

Do you think that the health of the sea, coasts, and lagoons is important for how you use them?

 Linking cultural ecosystem services and benefits to environmental health.

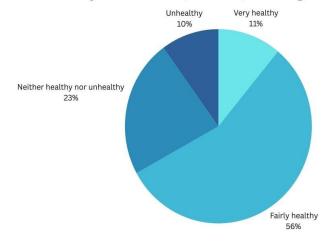

Gulf of Oristano questionnaire

 Ecosystems perceived as fairly healthy

How healthy are the sea, coasts, and lagoons?

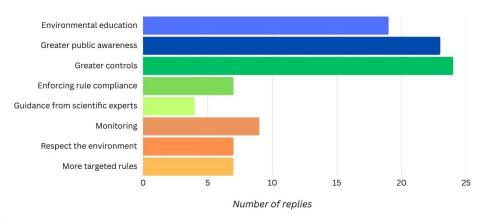

Gulf of Oristano questionnaire

How can these areas be protected in future?

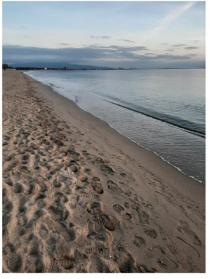

MARBEFES project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Impact of socio-cultural questionnaire?

Place-based impact:

- Highlights key cultural ecosystem practices (services) & benefits
- Highlights links between cultural practices wellbeing benefits –environmental heath – environmental management
- Highlights socially-desired measures for environmental management

MARBEFES project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Socio-cultural questionnaire

Completed (purple dots):

Irish Sea Southern Bay of Biscay Sardinia Begian Coast

In preparation (orange dots):

Gulf of Gdansk Norway Crete Baltic Sea coast

8+ BBTs

Map: map chart.net

MARBEFES project has received funding fom the European Union's Horizon Europe research and innovation programme under grant agreement no. 101060937.

Appendix 3k. Marine Protected Areas (MPAs)

MPA implementation challenges

The Sabineville government has decided to create an MPA

Environment Coastal area

The biodiversity is good quality but is changing negatively due to climate change and

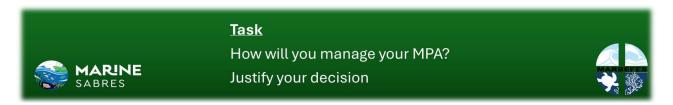

human activities

Society Tourism for marine activities – whale watching, diving, watersports.

Small-scale fisheries and industrial/large vessels. Small-scale fishers are concerned the

large vessels are pushing them out.

The government wants to build a windfarm, but there is local opposition

Appendix 31. Ocean Literacy

Q1. What are the most important environmental problems that the [BBT name] is now facing?

Problem	Pollution	Climate change	Overfishing	Invasive species
# of appearances	34	25	19	15

63 answers collected in total. The problems listed above appeared in at least one survey from each BBT.

Other prominent issues listed included mismanagement, overexploitation, overtourism, coastal erosion and eutrophication.

Q3. Based on your experience and interactions with the public, what are the most common false opinions or beliefs about the [BBT name]?

There are too many seals that steal fish from fishers' nets

Cormorants eat all the fish [in the Curonian Lagoon]

Fish from Gulf of <u>Gdańsk</u> are harmful/not suitable for consumption

You can't do anything in the coastal areas (e.g. picking mushrooms) [in the Curonian Lagoon]

[The] government promotes deforestation [in the Curonian Lagoon]

The Heraklion Gulf is not at any risk from climate change

Climate change will not affect the Irish Sea

Irish seas have very little life in them

The Gulf of Gdańsk is a desert without [any] life

The [Heraklion] Gulf doesn't have a lot of biodiversity

The Porsangerfjord is "dead"

Natural spaces are something inexhaustible

Appendix 4. Results of all Mentimeter surveys during the sessions

Appendix 4a. Feedback on the 2nd round of stakeholders consultations

SH	Q1. Which sector are you representing?
1	Private sector/SME
2	Fisheries
3	Tourism
4	NGO/non-profit
5	Fisheries
6	Authorities
7	Authorities
8	NGO/non-profit
9	Authorities
10	Authorities
11	Authorities
12	NGO/non-profit
13	Authorities
13	Additional
SH	Q2.Which (geographic) area are you representing?
1	Arctic
2	Arctic
3	Macaronesian
4	Atlantic (west-Europe)
5	Atlantic (west-Europe)
6	Atlantic (west-Europe)
7	Baltic
8	Atlantic (west-Europe)
9	Macaronesian
10	Macaronesian
11	Macaronesian
12	Baltic
13	Atlantic (west-Europe)
15	Atlantic (west-Europe)
SH	Q3.Are there any other topics/elements to be added?
1	Harnessing invasive species, better policies
2	Temperature, species move, live and die within a temperature
3	Marine Protected Areas
4	Livelihoods
5	Livelinous
	Atlantic Cultural Haritage
6	Atlantic Cultural Heritage
7	- Control of the other month
8	Coastal urban development
9	Water and energy
10	Geopolitical issues, climate change, governance,
11	
12	
13	Nothing
0.1	
SH	Q4.Are there any other topics/elements to be added?
1	Protection, implementation of MPE
2	

3 4 5 6	Youth. Feeling disconnected from nature.
7 8 9	
10 11 12 13	Make easy the dessicon making no CT

SH	Q5.Any other remarks?
1	
2	
3	
4	
5	
6	Nope
7	No
8	
9	
10	
11	Not really
12	No remarks
13	

Appendix 4b. BowTie and Causal Loop Diagram

SH	Q1. Which sector are you representing?
1	Private sector/SME
2	Fisheries
3	Tourism
4	NGO/non-profit
5	Fisheries
6	Academia/research
7	Authorities
8	NGO/non-profit
9	Authorities
10	Authorities
11	Authorities
12 13	Authorities
SH	Q2. Which (geographic) area are you representing?
1	Arctic
2	Arctic
3	Macaronesian
4	Atlantic (west-Europe)
5	Atlantic (west-Europe)
6	Atlantic (west-Europe)
7	Baltic
8	Atlantic (west-Europe)
9	Macaronesian
10	Macaronesian
11	Macaronesian
12	
13	Atlantic (west-Europe)
SH	Q3. In your work with (or managing) the marine environment, do you include
311	only ecological, social, or economic aspects, or all?
1	All the above
2	All the above
3	All the above
4	All the above
5	Ecological
6	Economic aspects
7	All the above
8	Economic aspects
9	Ecological
10	All the above
11	All the above
12	All the above
13	All the above
SH	Q4. Do you consider the BowTie to be appropriate for answering your
	management and sectoral questions?
1	Yes
2	Yes,
3	Yes and would love to try it 😉

Yes Yes It is indeed appropriate for certain managements challenges Yes Yes Yes Yes but it may be digitalized including Al Yes, but might be too complicated to use on a daily basis Yes It could help	
Q5. Do you consider the Causal Loop Diagram to be appropriate for answering your management and sectoral questions?	
Yes, but it is large. And every factor is a potential error Yes Yes, I like the fact that it's a closed loop so can keep circling the issue Yes Yes, I guess so Yes It is Yes Yes Yes Yes It is Yes Yes Yes but put in place sensor for the part A and compiterizind the algorithm Yes Yes It Can Help	
SH Q6. Do you consider the Causal Loop Diagram to be appropriate for answering your management and sectoral questions?	
1 2 3 4 5 6 7 8 9 10 11 12 No	
SH Q7. Are there any reasons why you would NOT use the BowTie?	
 No, but relevance is key No If its to complicated to use Would need more time/knowledge to be able to see if there are case stu where it would be inappropriate to use. Seems comprehensive, but very open to human error (missing items/misinterpreting) 	

7	No
8	It can be complex and unnecessarily for certain very simple challenges
9	Sometimes bow ties might get too complex and endless relations
10 11	Time Might be too complex
12	No
13	Not to the type of work (daily basis)
SH	Q8. Are there any reasons why you would NOT use the Causal Loop
	Diagram?
1	No, but it gets complicated very fast
2 3	No Nop
	Same response on needing more time to assess. Interested to see how the
4	loop could "expand" with more info.
5	No
6 7	No No
8	No
9	Same (endless interactions)
10	No,but is complex anyway
11	Might need a very complete set of inputs from stakeholders, making it
	aananlay ta yaa fan sinanla issyaa
12	complex to use for simple issues.
	complex to use for simple issues.
12	
12	Q9. Are there any reasons why you would NOT use the Causal Loop
12 13	
12 13 SH	Q9. Are there any reasons why you would NOT use the Causal Loop
12 13 SH 1 2 3	Q9. Are there any reasons why you would NOT use the Causal Loop
12 13 SH 1 2 3 4	Q9. Are there any reasons why you would NOT use the Causal Loop
12 13 SH 1 2 3	Q9. Are there any reasons why you would NOT use the Causal Loop
12 13 SH 1 2 3 4 5	Q9. Are there any reasons why you would NOT use the Causal Loop
12 13 SH 1 2 3 4 5 6 7 8	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram?
12 13 SH 1 2 3 4 5 6 7 8 9	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram?
12 13 SH 1 2 3 4 5 6 7 8 9 10	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram?
12 13 SH 1 2 3 4 5 6 7 8 9	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram?
12 13 SH 1 2 3 4 5 6 7 8 9 10 11	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram?
12 13 SH 1 2 3 4 5 6 7 8 9 10 11 12	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram?
12 13 SH 1 2 3 4 5 6 7 8 9 10 11 12 13	Q9. Are there any reasons why you would NOT use the Causal Loop Diagram? No

SH	Q10. Any other remarks?:
1	
2	
3	Is there any AI being used here to help on the system?
4	Thank you for presentation :)
5	
6	no
7	-
8	No
9	No
10	

11 No

12

Appendix 4c. Scenarios of Societal and Environmental change under SSP1, SSP3, SSP5

CII	O4 White out for the development of the control of
SH	Q1. Which professional sector are you representing?:
1	Industry / SME
2	Industry / SME
3	Industry / SME
4	NGO
5	Industry / SME
6	Academia / Research
7	Authorities (governance / policy)
8	NGO
9	Authorities (governance / policy)
10	Authorities (governance / policy)
11	Authorities (governance / policy)
12	Authorities (governance / policy)
SH	Q2. Do you see the potential of applying scenarios in your work?:
1	Yes
2	Yes
3	Yes
4	Yes
5	Yes
6	Maybe
7	Maybe
8	Yes
9	Yes
10	Maybe
11	Yes
11 12	Yes Maybe
12	
	Maybe
12	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?:
12 SH 1	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap
12 SH 1 2	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap 2
12 SH 1	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap 2 With guidelines showing the best way to reach the choosed scenario
12 SH 1 2	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained
12 SH 1 2 3	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios.
12 SH 1 2 3 4 5	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful
12 SH 1 2 3 4 5 6	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful
12 SH 1 2 3 4 5 6 7	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful Written guidelines
12 SH 1 2 3 4 5 6 7 8	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful Written guidelines Both interactive tool and mind map are good
12 SH 1 2 3 4 5 6 7 8 9	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful Written guidelines Both interactive tool and mind map are good 1, 2
12 SH 1 2 3 4 5 6 7 8 9 10	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful Written guidelines Both interactive tool and mind map are good 1, 2 2
12 SH 1 2 3 4 5 6 7 8 9	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful Written guidelines Both interactive tool and mind map are good 1, 2 Interactive tool would be usefull, but I wouldn't call it a need
12 SH 1 2 3 4 5 6 7 8 9 10 11	Q3. Based on your experiences/preferences, what kind of scenarios-tool would you need?: Both a interactive tool or a mindmap With guidelines showing the best way to reach the choosed scenario Something on the follow-up. What to DO with the information obtained from the best/worst-case scenarios. Both a interactive tool and mindmap is useful Written guidelines Both interactive tool and mind map are good 1, 2 2
12 SH 1 2 3 4 5 6 7 8 9 10	Q3. SH	Q24. What would you need to see, know, or understand in order to support an MPA in your region?: 1
1	Long time plan, open for adoption and adjustment in the future. Depending on findings and social adjustments
2	A specific study on the exact area indicating benifits
3	A viable plan
4	Compared results with other already implemented MPAs
5	Advantages on implementing one for all tye sectors with Ecological base
6	How livelihoods would be supported for those who utilize the area
7	Mapping of the seafloor and pictures of the sea bottom to justify why it should be an MPA
8	The effects of an MPA
9	Long time plan
10	A good participatory process which assures local community engagement
11	Valuation of benefits from conservation
12	Planning and relocation of the rest of activities developed previously in those areas

SH	Q25. Who do you see as "champions" and/or "spoilers" for initiating an MPA
	in your region? : Regulations are for ever, regulations are for ever
1 2	No opinion
3	Chapions - Ecological Defenders and Scientists Spoilers - Extract activities
J	Champions: the local community. Local government.
4	Spoilers: large-scale fishing industry, transport industry, sea mining, and
	offshore energy.
5	Champions Ecological enthusiastic people
6	
7	Champions: local small organisations Spailors: local governments
8 9	Champions: local small organisations. Spoilers: local governments Implementation, enforcement
10	climate change deniers
11	Ecologist ,and
12	Champion – researchers Spoilers -(sometimes) reality
13	
14	
SH	Q26. What narrative could help to support the initiation of an MPA?:
1	Q20. What harrative could help to support the initiation of all WFA:
2	
3	
4	
5	
6	
7 8	
9	
10	
11	
12	Participatory process, which includes the views and the trade-offs for all
	interessted parties
13	
14	
SH	Q27. What is the most important condition for an MPA to succeed?: 1
1	Local authorities make the decision, not national
2	Support from those affected
3	Perceptable advantages
4	Ocean Conservation Literacy
5	Agreement between user parts
6 7	Local buy-in & appropriate monitoring/governance Regional benefits
8	Agreement between the different parties involved (stakeholders)
9	g. coment settles and americal parties involved (state-invaled)
10	Local benefits
11	Implementation, enforcement
12	monitoring and inspections of applicable regulations
13	Social consensus. Good cience
14	
15	International cooperation
16	Beneficts for biodiversity

SH	Q28. Any other remarks? :
1	
2	
3	Beers are getting warm
4	
5	No
6	nope
7	
8	No
9	
10	No

SH	Q5.For the AI chatbot, which interaction style would you find most helpful?:
1	A mix of both — I like having the option to follow guidance or ask freely
2	Open — I'd rather type my question freely and have a conversation
3	A mix of both $-$ I like having the option to follow guidance or ask freely
4	A mix of both — I like having the option to follow guidance or ask freely
5	A mix of both $-$ I like having the option to follow guidance or ask freely
6	A mix of both — I like having the option to follow guidance or ask freely
7	Open — I'd rather type my question freely and have a conversation
8	A mix of both — I like having the option to follow guidance or ask freely
9	A mix of both — I like having the option to follow guidance or ask freely
10 11	A mix of both — I like having the option to follow guidance or ask freely
12	Guided — I prefer answering a series of clear, step-by-step questions A mix of both — I like having the option to follow guidance or ask freely
12	A fillx of both — Flike having the option to follow guidance of ask freely
SH	Q6.Is there anything about the design or layout of the website that you think
	could be improved?:
1	No
2	No Looks clear
3	Can we chose the color of the seastar?
4 5	Guidance on how data should be that goes into the app
6	don't know for the moment
7	Nope
8	Maybe a map would be useful?
9	No
10	More colored.
11	Not at first sight, but I would have to test it on my own to answer this
	properly
12	properly No
12	
	No
12 SH 1	Q7.Is there anything about the functionality of the toolbox that you think could be improved? :

Appendix 4f. Decision Support System - Shiny App_

SH	Q1. Which sector are you representing?:
1	Private sector/SME
2	Fisheries
3	Tourism
4	Fisheries
5	Academia/research
6	Authorities
7	NGO/non-profit
8	Authorities
9	Authorities
10	Authorities
11	NGO/non-profit
12	Authorities
SH	Q2.Which (geographic) area are you representing?:
1	Arctic
2	Arctic
3	Macaronesian
4	Atlantic (west-Europe)
5	Atlantic (west-Europe)
6	Baltic
7	Atlantic (west-Europe)
8	Macaronesian
9	Macaronesian
10	Macaronesian
11	Baltic
	
12	Atlantic (west-Europe)
12	Atlantic (west-Europe)
12 SH	Atlantic (west-Europe) Q3.What specific decisions or actions can our tools help you with? : 1
12 SH 1	Atlantic (west-Europe) Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs
12 SH 1 2	Atlantic (west-Europe) Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity
12 SH 1 2 3	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance
12 SH 1 2 3 4	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs
12 SH 1 2 3	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity
12 SH 1 2 3 4	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten
12 SH 1 2 3 4 5	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders
12 SH 1 2 3 4 5 6 7	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks
12 SH 1 2 3 4 5 6 7	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring
12 SH 1 2 3 4 5 6 7 8 9	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels
12 SH 1 2 3 4 5 6 7	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring
12 SH 1 2 3 4 5 6 7 8 9 10	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs
12 SH 1 2 3 4 5 6 7 8 9 10 11	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs Interaction with industrial activities, Q4.Do you prefer to select SES indicators from the pre-defined list or create the indicators yourself?:
12 SH 1 2 3 4 5 6 7 8 9 10 11 12	Q3. What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs Interaction with industrial activities , Q4.Do you prefer to select SES indicators from the pre-defined list or create the indicators yourself?: Both
12 SH 1 2 3 4 5 6 7 8 9 10 11 12 SH	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs Interaction with industrial activities, Q4.Do you prefer to select SES indicators from the pre-defined list or create the indicators yourself?: Both Both might be needed.
12 SH 1 2 3 4 5 6 7 8 9 10 11 12 SH	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs Interaction with industrial activities , Q4.Do you prefer to select SES indicators from the pre-defined list or create the indicators yourself?: Both Both might be needed. Both. So you can pit something there maybe its not there
12 SH 1 2 3 4 5 6 7 8 9 10 11 12 SH 1 2	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs Interaction with industrial activities , Q4.Do you prefer to select SES indicators from the pre-defined list or create the indicators yourself?: Both Both might be needed. Both. So you can pit something there maybe its not there Both
12 SH 1 2 3 4 5 6 7 8 9 10 11 12 SH 1 2 3	Q3.What specific decisions or actions can our tools help you with?: 1 Creating a layout specifically for needs Helpful as a map of spatial mapping of activity More used areas and importance To define MPAs To define the impacts and importance of each activity How to justify to stakeholders why MPAs are important. Enlighten stakeholders Monitoring shipwrecks MPA planning,educational perspective,monitoring Many Zonation, protection levels Relations between climate change variables Trade offs Interaction with industrial activities , Q4.Do you prefer to select SES indicators from the pre-defined list or create the indicators yourself?: Both Both might be needed. Both. So you can pit something there maybe its not there

7	Pre-defined seem to be quite direct, but some locally important might be
8	missing Both
9	Yes, will be more useful but open to ad local thing
10	res, will be more useful but open to du local tilling
11	Both
12	Both possibilities
	·
SH	Q5.How many loops found in the SES you would like to be displayed?:
1	
2	No opinion. Too many give an unclear picture
3	You should be able to add or remove loops like the price list on booking
4 5	20 5
6	10
7	Around 10
8	As many as you need, but beeing able to chose what i want to see
9	5 to 10
	I wanna see it all, and to then be able to isolate some of them (by
10	importance, for example)
11	The more the better
12	10
CII	Q6.Please rank the following SES metrics based on their usefulness,
SH	according to you.: Designation of an element type (bottleneck, neutral,
1	leverage point) 2
2	1
3	3
4	2
5	3
6	3
7	2
8	3
9	2
10	2
11	1
12	
	Q7.Please rank the following SES metrics based on their usefulness,
SH	according to you. : Reinforcing or balancing character of loops
1	1
2	2
3	2
4	3
5	2
6	2
7	3
8	2
9	
10	3
11	2
12	

SH	Q8.Please rank the following SES metrics based on their usefulness, according to you.: Key drivers and Outcomes of the whole SES
1	3
2	3
3	1
4	1
5	1
6	1
7	1
8	1
9	1
10	1
11	3
12	

SH	Q9.What other metrics you would like to be presented by the SES tool?:
1	Not sure
2	No
3	Not sure
4	Don't remember what metrics SES presented
5	No idea for the moment
6	For this moment,looks like no,but you never know
7	Not now.
8	Not sure
9	No
10	I don't identify any at the moment

SH	Q10.Do you feel the GIS tool will assist you in constructing a simple SES for
1	your area? : Yes
2	Yes
3	Yes
4	Yes
5	yes, But
6	Yes
7	Yes
8	Yes
9	Yes
10	Yes
11	Yes
12	Yes, But
12	res, but
CI.I	Q11.What are your recommendations for future developments of decision
SH	support tools to ensure practical relevance for end-users?:
1	
2	No opinion.
3	KISS - KEEP IT SUPER SIMPLE
4	Need to test the ones you have first
5	have none for the moment
6	Sorry,no recommendations
7	None
8	Not yet
9	Simplifiying
10	I don't have any
11	The future will show
12	Promote testing exercises with the stakeholders
SH	Q12.Any other remarks?:
1	No
2	No
3	
4	No
5	nope
6	Nope
7	No
8	No
9	
10	No
11	No
12

SH	Q14.What do you think are the major problems in using the tools and approaches you saw today?: 1

1	Accessibility and/or hindrance in usage
2	I don't have any
3	I did not notice any
4	They look straight forward. But limited time can make my accessment be wrong
5	Proper understanding on how they work. Combine the results with decision makers.
6	Describing how to use them. Capturing all contexts where they can be used.
7	I liked them, I don't see a problem with them
8	I think the time obstacle could be a problem. That people don't have time to study how to use the different measures and methods. But they are very
	useful for people that have time to learn them
9	
10	Clarity of the tools
11	Incorporating it to a daily basis work
12	A variable learning curve for different tools. Some can be more tricky to master
13	Digital development needed, adaptación for specific functions
14	The complexity
15	A matter of time .must be simplify
16	Thinking of problems should be more rational
17	Be aware of all the inputs
4.0	On the technical level, and on academic level, they are useful. Difficult to use
18	on the political/decision-making level
	Altough useful, they need a perfect understanding of the principles and the
19	reach, making it difficult to have a wide and repeated use. They also need
	participatory processes, not likely to happen
	participator, processes, moralization in impression
SH	Q15.What do you think are the major problems in using the tools and

Marine SABRES Milestone 2.17 - MARBEFES Second Annex to Deliverable 1.2

11	Group Spirit Organization
	Aware of diferent realitys/knowledge Networking with smart, kind people has been really enriching and pleasant.
12	Getting to understand somewhat complex issues by being clearly explained by the team in such a short time was very valuable.
SH	Q41.What did you like the least about the workshop?: 1
1	Some were detailed explanations
2 3	Maybe more stakeholders from the Azores could participate
4	Days very long. Would be better to do shorter days over 3 days in my
	opinion, or remove some tools to make the day shorter.
5	The maybe a bit too busy program The head wasn't working properly on the second day evening, too much
6	information.
7	
8	A bit of more time to interact Extensive theoretical contents
9	Extensive theoretical contents
40	Lack of time for stakeholders to develop more elaborated contents
10 11	It was a greta workshop Terms used by cientists (abreviations) sometimes dificulted comunication
12	It takes a bit of time to putting the dynamics tho work, so sometimes I feel
12	the timing is too tight
SH	Q42.What did you like the least about the workshop?: 2
1	Tight schedule
2	Tight schedule
2	This is not about the workshop, but the hot food options for vegetarians/vegans we're not many. They also told people dishes were
